ANINDA SUNDAR HOWLADER

CHAPTER 01

Welcome

স্বাগত

This book is the single source of truth for how GRU953 looks, speaks and behaves. If you make anything that carries the GRU953 name — a screen, a repository, a document, a post — start here.

এই বইটি GRU953-এর চেহারা, ভাষা আর আচরণের একমাত্র নির্ভরযোগ্য উৎস। GRU953 নামে কিছু বানালে — স্ক্রিন, রিপোজিটরি, ডকুমেন্ট বা পোস্ট — শুরু করুন এখান থেকেই।

The promise this book exists to keep

Simple technology. For everyone.

সহজ প্রযুক্তি। সবার জন্য।

Four words in each language. Every rule in this book is downstream of them. When a decision is genuinely difficult, the tie-breaker is always: *which option keeps that promise?*

How to use this book

Everything is inside this one file, and it works with no internet connection. The **Contents** list jumps between chapters. The **theme** button cycles automatic, light and dark. The **EN + বাংলা** button hides the Bangla if you want to read faster. Printing the page, or saving it as a PDF, gives you the whole book. The layout scales itself to whatever screen you are on, from a small phone to a large display — there is nothing to switch.

Every asset — logos, artwork, fonts, tokens, templates, licence documents — is embedded in the page itself, so the download buttons in **Every asset** work offline too. Nothing here depends on a server staying up.

The one rule above all

When this book offers you a choice, choose the simpler option. Simplicity is not a style here; it is the promise the brand makes.

এই বই যেখানে বেছে নিতে বলে, সেখানে সহজটিই বেছে নিন। সরলতা এখানে কোনো স্টাইল নয়; এটিই ব্র্যান্ডের প্রতিশ্রুতি।

The whole system in one page

If you read nothing else, read this table. Everything after it is detail.

Name	GRU953 — one word, uppercase, no hyphen, never translated. Said as one word: "Groo-nine-five-three". Always immediately followed by what it is.	The name
Voice	Precise and quietly confident, and warm. Plain UK English. No hype, no jargon, no guess presented as fact.	Voice and tone
Mark	The Soaring Bird — one drawing, used at 24px and above; below that, the tile. The mark does not move.	The logo
Colour	Meridian #1A1753 as the ground; Daybreak as the signature — one hue with two tuned values, #B45A39 on light grounds and #FFAB8E on dark; Ember #EDB24D in support. Why two values is worked out once, in Colour .	Colour
Type	Sora for display and the wordmark, Noto Sans for body, Noto Sans Bengali for all Bangla, JetBrains Mono for code.	Typography
Space	A 4px scale, a 12-column grid, four radii, three depths. When unsure, use 16px.	Design rules
Language	Bilingual by default. Bangla is written as an original, never translated.	Writing in Bangla
Licence	Apache-2.0 for the system, PolyForm Noncommercial 1.0.0 for the book. The marks are not licensed at all.	Licence and governance

Words this book uses

This book measures things, so it uses a few technical words. Each one is explained here once, in plain English, and then used without ceremony.

WCAG	The Web Content Accessibility Guidelines — the accessibility rulebook that regulators and procurement teams actually point to. Version 2.2, level AA, is the bar this kit holds itself to.
Contrast ratio	How different two colours are in brightness, written like <code>4.5:1</code> . Bigger is easier to read. WCAG wants at least 4.5:1 for body text and 3:1 for large text, icons and borders.
Luminance	How much light a colour emits — its brightness, not how colourful it is. Contrast is a ratio between two luminances and nothing else.
ΔE (delta E)	How different two colours <i>look</i> to a normal eye. Under about 1, nobody notices. Over about 10, anyone would call them different colours. The method used here is called CIEDE2000.
OKLCH	A way of writing a colour as lightness, colourfulness and hue, built so that equal steps look equal to the eye. Ordinary hex codes are not like that, which is why the palette is built in OKLCH and then converted.
Monotonic	A ramp is monotonic when every step is reliably lighter, or reliably darker, than the last — it never doubles back. An unpredictable ramp is unusable for an interface.
Counters	The small enclosed gaps inside a shape, like the hole in an <i>o</i> . They are the first thing to blur shut as a drawing gets smaller, which is why the bird has a size floor.
Squircle	A rounded square, rounder than a normal button corner. It is the exact shape iOS and Android use for app icons.
Token	A named value you use instead of a literal one — <code>--gru-accent</code> rather than <code>#B45A39</code> . Change the token once and everything using it changes with it.
Source-available	Code or writing you can read and copy but not sell. It is <i>not</i> the same as open source, and this book never blurs the two.
Outlines	Letters converted into shapes, so they do not need the font installed to look right. Every lockup in this kit is outlines.

What this book is honest about

A brand guide that only lists strengths is marketing. These are the real limits.

- **Nothing here has been tested with a real screen reader by a real user.** The contrast is computed and proved; lived accessibility is not the same thing.
- **Every colour in this edition is measured.** There is no carried-over palette taking its correctness on trust; the earlier one was removed rather than left unverified. Every ramp, every role and every chart colour on these pages was computed and checked on this build.
- **To a developer audience, "GRU" already means *Gated Recurrent Unit*.** That reading risk is real, it was measured, and the decision to keep the name was taken with it in view. See **The name**.
- **The marks are reserved but not registered.** That is a statement of position, not a legal shield. See **Licence and governance**.
- **The brand has one person behind it.** Wherever this book might read as though it has a team, it is wrong.

The brand

ব্র্যান্ড

Purpose · উদ্দেশ্য

GRU953 exists to make genuinely simple, honest technology that anyone can use — whatever their money, language, or ability. Tools should not demand that people become experts, buy their way in, or leave their language at the door.

GRU953-এর জন্ম সত্যিকারের সহজ, সৎ প্রযুক্তি বানানোর জন্য — যা যে কেউ ব্যবহার করতে পারেন; টাকা, ভাষা বা সামর্থ্য যা-ই হোক। কোনো টুল যেন মানুষকে বিশেষজ্ঞ হতে, টাকা দিয়ে ঢুকতে, বা নিজের ভাষা দরজার বাইরে রেখে আসতে বাধ্য না করে।

The tagline

Simple technology. For everyone.

সহজ প্রযুক্তি। সবার জন্য।

Four words in each language. It is a promise, not a slogan, which is why it is written as two flat statements and not as wordplay. Use it complete. Do not shorten it to “Simple technology”, do not extend it, and do not translate it into a third language without checking that the second sentence still lands as a promise rather than a boast.

The three pillars · তিনটি স্তম্ভ

1. Simple by design · গোড়া থেকেই সহজ

Build only what the task needs. Every feature, word and pixel must earn its place; when in doubt, leave it out.

কাজে যতটুকু লাগে, ততটুকুই বানান। প্রতিটি ফিচার, শব্দ ও পিক্সেলকে নিজের জায়গা অর্জন করতে হবে; সন্দেহ হলে বাদ দিন।

2. For everyone · সবার জন্য

Bilingual by default, accessible by default, offline-friendly by default, and free to use.

স্বভাবতই দ্বিভাষিক, স্বভাবতই প্রবেশগম্য, ইন্টারনেট ছাড়াও সচল, আর ব্যবহারের জন্য বিনামূল্যে।

3. Honest craft · সৎ কারিগরি

No hype, no dark patterns, no guesses presented as facts. Claims are computed, limits are stated, and quality is checked before it ships.

কোনো অতিকথন নয়, কোনো ছলচাতুরী নয়, অনুমানকে সত্য বলে চালানো নয়। দাবি হিসাব করে বলা হয়, সীমাবদ্ধতা স্পষ্ট করা হয়, মান যাচাই করে তবেই ছাড়া হয়।

The four values · চারটি মূল্যবোধ

1. **Simplicity first.** · আগে সরলতা।
2. **Care for every user.** · প্রতিটি ব্যবহারকারীর যত্ন।
3. **Honesty.** · সততা।
4. **Craft.** · কারিগরি নিষ্ঠা।

If a decision serves one value by betraying another, it is the wrong decision — find the version that serves all four.

কোনো সিদ্ধান্ত একটি মূল্যবোধ রক্ষা করতে গিয়ে আরেকটি ভাঙলে, সেটি ভুল সিদ্ধান্ত — চারটিই রক্ষা পায় এমন পথ খুঁজুন।

What GRU953 is

A **solo software studio**. One developer, in Bangladesh, building tools and shipping them in the open. It is built to grow into a small product house — where individual apps carry their own names under GRU953 — but it is not one today, and the brand never pretends otherwise.

Who it is for, in order

The order matters, because a brand that tries to please four audiences equally pleases none.

PRIORITY	AUDIENCE	WHAT THEY ARE LOOKING FOR	HOW THE DESIGN ANSWERS
1	Developers and the open-source community	Signals of technical taste: restraint, precision, things that actually work	Computed contrast rather than claimed. A mark with a size floor that is checked by a script, not asserted. Tokens you can paste into code. No decoration without a reason.
2	Employers and recruiters	Evidence of range and of finishing things	A complete, documented system. Governance documents. Honest statements of limits.
3	Paying clients	Reassurance that the job will be done	Clear licence terms. Templates for invoices and proposals. A tone that does not oversell.
4	End users of the apps	Warmth, plain language, their own language	Bilingual by default. Plain words. Error messages that help rather than blame.

Designing for developers first is not a snub to the others. A developer brand that impresses developers reads as competent to a recruiter, trustworthy to a client, and careful to a user. The reverse is not true.

Personality

Precise and quietly confident, and warm. Those two together are the whole character, and the combination is where the distinctiveness lives — most engineering brands pick precision and end up cold, while most “friendly” brands pick warmth and end up imprecise.

In practice:

- Exact about numbers, generous about people.
- Calm. Never shouts, never uses an exclamation mark to manufacture enthusiasm.
- Says “I don’t know” out loud.
- Nothing decorative that has not earned its place.

What GRU953 is not

Stating this is more useful than another adjective:

- Not a startup. No growth language, no “we’re on a mission to disrupt”.

- Not an agency or a team. There is no “we” pretending to be several people.
- Not enterprise software. No jargon used as a credential.
- Not a personal blog brand. The work is the subject, not the person’s opinions.
- Not playful for its own sake. Warmth comes from clarity and care, not from jokes.

The positioning statement

For **developers, employers and clients** who want to see whether one person can build software properly, **GRU953** is a **solo software studio** that makes **genuinely simple, accessible, bilingual tools and gives the whole system away**. Unlike a portfolio that shows finished screenshots, GRU953 shows the working — the computed contrast, the stated limits, the licence that actually permits what it promises.

Showing the working is the brand. In practice that means one habit: whenever GRU953 claims something measurable, publish the measurement beside it. A contrast ratio, a file size, a load time, a limit. That is the whole differentiator, and it is a thing to do rather than a thing to say.

The name

নাম

How it is written

GRU953 — one word, all uppercase, no hyphen, no space, never translated.

CORRECT	WRONG	WHY IT MATTERS
GRU953	Gru953 , gru953 , GRU-953 , GRU 953 , GRU_953	A name written five ways is five weak names instead of one strong one.
GRU953 inside a Bangla sentence	জিআরইউ৯৫৩	The name is a name. It is not transliterated, in any language.
gru953 as a folder, repo or package name	using it in prose	Lowercase is a filesystem convention only — it is how computers prefer names, not how the brand is written.
GRU-953 as the GitHub account handle	using it as the brand name	The hyphen is there because GitHub required it. It identifies the account, not the brand.

How it is said

One word: “Groo-nine-five-three.”

Not spelled out letter by letter, and not “G-R-U nine hundred and fifty-three”. When introducing it aloud for the first time, say it and then immediately say what it is: “GRU953 — it’s my software studio.” Two seconds of context prevents a minute of confusion.

The digits stay digits

953 is written in Latin numerals everywhere, including in Bangla text. Bengali numerals (৯৫৩) are used for ordinary numbers in Bangla writing, but **not inside the name** — the name is a fixed string, and changing its characters makes it a

different name. The wordmark uses tabular figures so the three digits always occupy equal width.

The elephant in the room, measured rather than ignored

“GRU” means several other things. All four were checked properly, with sources, and here is the honest assessment.

“GRU” ALSO MEANS	THE ACTUAL RISK
Gated Recurrent Unit — a standard neural-network component	This is the one that matters. In machine-learning circles GRU means this and nothing else. Someone skimming a GitHub profile could read “GRU953” as the name of an AI model. It is not a legal risk — nobody owns a technical term — but it is a <i>reading</i> risk, and it lands squarely on the priority audience.
GRU — Russian military intelligence	Very low. The agency is never written with digits after it. The digits do the separating.
Gru — the character in <i>Despicable Me</i>	Very low , and mildly warm if anything. The character is sentence-case “Gru”, never “GRU953”.
GRU — São Paulo–Guarulhos airport code	Very low. Confined to travel contexts.

The decision, and the mitigation

The name stays. It is already established, the domains and package names are free, and no company or trademark holds it. But the reading risk is answered, and the answer is contextual rather than cosmetic:

Wherever GRU953 appears for the first time in any context, it is immediately followed by what it is.

- ✔ “GRU953 — a solo software studio”
- ✔ “GRU953 · Simple technology. For everyone.”
- ✔ “Built by GRU953, a one-person studio in Bangladesh”
- ✗ “GRU953” standing entirely alone at the top of a profile with nothing after it

This is why the tagline sits directly beneath the wordmark in every lockup and every piece of social artwork. It is not decoration. It is doing a job.

Naming things under GRU953

As the studio grows into a product house, apps get their own names. The rules:

The pattern is `<Name> by GRU953` — a plain English noun, then the maker's credit. GRU953 is a parent brand over apps that carry their own names, and this is the form that says so.

- ✓ `Ledger by GRU953`
- ✓ `Tally by GRU953`, then simply `Tally` after the first mention
- ✗ `GRU-Ledger`, `Gru953Ledger`, `953 Ledger`, `LedgerGRU`
- ✗ `Ledgerly`, `Ledgerify`, `Ledgr` — invented words age badly and are hard to say in two languages

One exception. When a name is too generic to stand alone in a list — `Notes`, `Files`, `Camera` — put the studio first instead: `GRU953 Notes`. Never both forms in the same document.

A good product name here is: a real word, sayable by a Bangla speaker and an English speaker without hesitation, spellable after hearing it once, and descriptive of what the thing does. **A bad one is:** a misspelling, a dropped vowel, a suffix like *-ly* or *-ify*, or anything that needs explaining before it can be used.

Check before committing: is the `.com` or `.dev` free, is the npm and PyPI package name free, and does the word mean something unfortunate in Bangla?

Availability, as verified on 13 August 2026

Checked with registry lookups and control tests, not guessed.

Two words used below. **RDAP** is the standard way a computer asks a domain registry "is this name taken?" — it replaced the older WHOIS. A **control test** means first asking about a name that is definitely registered, to prove the method works; without it, a "not registered" answer could just mean the lookup was broken.

WHAT	STATUS	CONFIDENCE
gru953.com	Not registered	Verified — Verisign RDAP returned 404, control test passed
gru953.dev	Not registered	Verified — RDAP 404, control test passed
gru953.io	Not registered	Verified — Identity Digital RDAP 404, control test passed
gru953.org	Not registered	Verified — PIR RDAP 404, control test passed
gru953.net	Not registered	Verified — Verisign RDAP 404, control test passed
npm package gru953	Not taken	Verified — registry 404
PyPI project gru953	Not taken	Verified — 404 on JSON and simple index
US trademark register	No result for gru953	Verified — control search returned results, so the zero is real
GitHub username gru953	Appears unclaimed	Strong signal, not a guarantee — GitHub also returns 404 for suspended and renamed accounts
X handle gru953	Appears unclaimed	Strong signal, not a guarantee — same caveat
Reddit, LinkedIn personal URL	Unknown	Both blocked automated checking. Check by hand.
Trademark registers outside the USA	Unknown	Bangladesh's DPDT, EUIPO and WIPO all need a human search. If GRU953 ever becomes commercially significant, pay a trademark attorney.

One thing worth doing soon: five domains and two package names are currently free. They will not stay free forever, and they are cheap. This book does not quote prices, because any price printed here would be stale within weeks.

Voice and tone

কণ্ঠস্বর ও সুর

GRU953 — verbal identity (English)

Date: 12 August 2026 · Built on 02_strategy/BRAND-SPEC.md , which is final.
Scope: the English voice. Bangla is a first-class original written by the Bangla lead, never a translation of anything in this file. Where a surface must ship bilingually, this file gives the English half and says so.

Two words you will see a lot, in plain terms: **Voice** is what never changes about how GRU953 sounds. **Tone** is how that voice bends for the situation. Same person, different room.

Read this first: what is real here, and what is stage dressing

The **rules** in this file are the deliverable. Most of the **examples** are not.

PART OF THE FILE	STATUS
Every rule, list and table	Real. Use it.
Sections 1, 2, 3 and 6 examples	Unverified. They use an imaginary app called "Ledger" and invented figures: speeds, file sizes, version numbers, dates, error codes, package names, domains and the BDT rates in section 2.
Sections 4 and 5 (elevator lines and bios)	Written to be pasted, but not yet approved by Aninda , and some lines only become true once at least one app is public. Each one carries its own note.

Never paste an invented number into anything public. Measure it, then write the real one. Anything marked [placeholder] is a blank Aninda must fill before that line is used.

Two licence names appear throughout, so here they are in plain words. **Apache-2.0** is an open source licence that lets anyone use, change and sell the code, as long as they keep the copyright notice and the NOTICE file. It covers the **system** — the colour tokens, the stylesheets and the scripts. **PolyForm Noncommercial 1.0.0** covers the **writing** — this guide, the guidebook, the templates and the

documentation. It permits any noncommercial use freely; selling needs permission. It is source-available, not open source. Neither licence grants any right to the GRU953 name or marks.

1. Voice

In one line

GRU953 sounds like a careful person explaining their own work to someone they respect: plain, exact, warm, and never selling.

That line is the test. If a sentence could have come from a marketing department, a lawyer, or a robot, it is not GRU953. Read it aloud. If you would not say it to a person sitting next to you, rewrite it.

Two rules that come straight from the locked spec

These are not style preferences. They are decided, and they bind every sentence.

1. The first mention always says what GRU953 is (BRAND-SPEC §7a). To a developer, "GRU" already means Gated Recurrent Unit, a standard piece of neural-network machinery. So someone skimming could read "GRU953" as the name of an AI model. The fix is contextual. Wherever the name appears for the first time in any piece of writing, what it is follows immediately.

- Yes: "GRU953 — a solo software studio". "GRU953 · Simple technology. For everyone."
- Yes: "Built by GRU953, a one-person studio in Bangladesh."
- No: "GRU953" alone at the top of a profile with nothing after it.

2. It is said as one word: "Groo-nine-five-three" (BRAND-SPEC §1). Not spelled out letter by letter. Not "nine hundred and fifty-three". This matters in a call, a video, a talk, or a voice note, so it belongs here and not only in the guidebook.

The four attributes

1. Plain

What it means: ordinary words, short sentences, one idea at a time. The shortest version that is still true. The BRAND-SPEC rule applies to writing as well as design: when there is a choice, choose the simpler option.

Situation: the opening line of a README.

- **Say this:** "Ledger keeps track of small shop takings. It works offline, on an old phone, in Bangla or English."

- **Not this:** "Ledger is a lightweight, offline-first financial tracking solution engineered to empower micro-enterprise stakeholders across low-connectivity environments."

Why the second one fails: it is longer, it says less, and a shopkeeper cannot see themselves in it.

2. Exact

What it means: every claim carries its number, its date, or its limit. If you have not measured it, you do not claim it. If you cannot verify it, you write "unverified" and move on. This is the BRAND-SPEC rule "claims are computed and stated with their number", applied to prose.

Situation: a release note.

- **Say this:** "Startup is faster. Cold start on a Redmi 9A dropped from 4.1s to 1.6s, measured over ten runs."
- **Not this:** "Massive performance improvements. The app is now blazing fast!"

Why the second one fails: "blazing fast" is a feeling, not a fact, and it cannot be checked, argued with, or trusted next time.

3. Warm, not chummy

What it means: the reader is a person having a normal day, not a "user", and not your mate. Warm means taking responsibility, never blaming them, and always saying what to do next. Chummy means jokes, slang, exclamation marks and forced cheer, which stop being funny the moment someone is actually stuck.

Situation: an error message shown in the app.

- **Say this:** "Your entry didn't save. The phone has no space left. Free up about 20 MB and tap Save again. Nothing you typed has been lost."
- **Not this:** "Oops! Something went wrong 😊 Please try again later!"

Why the second one fails: it is cheerful about the reader's problem, names no cause, and gives no action. "Try again later" is not an instruction.

4. Steady

What it means: the same flat calm whether the news is good, bad, or embarrassing. No drama when something breaks, no grovelling, no defensiveness, no hype when something ships. Apologise once, plainly, then say what you are doing about it.

Situation: replying to a bug report from a stranger.

- **Say this:** "Thanks, I can reproduce this. The date field breaks on months with fewer than 31 days, so it has been wrong since 2.3.0. I'll fix it this week and reply

here when it's released."

- **Not this:** "Oh no, I'm SO sorry, this is really embarrassing, I can't believe I missed this, I'll try to look at it as soon as I possibly can, so sorry again!!"

Why the second one fails: three apologies, no diagnosis, no date. It asks the reporter to manage the developer's feelings.

2. The tone dial

Same voice, four rooms. The dial has two settings you actually turn: **how much warmth** and **how much detail**.

SITUATION	WARMTH	DETAIL	THE MOVE	NEVER
Welcoming someone new	High	Low	Get them to one working thing fast	A tour of the features
Explaining a limitation	Medium	High	Name the limit, then the workaround	Apologising for the design
Apologising for a bug	Medium	High	Own it once, give a date	Excuses, or three sorries
Asking for money	Medium	High	State the number and what it buys	Hinting, or discounting yourself

Welcoming someone new

Warm, short, and pointed at one action. Do not explain the studio, the licence, or the roadmap yet.

Welcome. Ledger is ready to use. There is no account to make. Add your first sale and see whether it fits how you work. If it doesn't, nothing is lost.

Explaining a limitation

Flat and confident. A named limit is a feature of an honest product, so do not write about it in an embarrassed voice. Give the reason, then the way round it.

Ledger holds one shop, not several. That keeps the whole thing to two screens, which is the point. If you run two shops, install it twice under two profiles. If you

need ten, Ledger is the wrong tool and I'd rather say so now.

Apologising for a bug

One apology. What broke, who it hit, what you have done, what they should do.

Version 2.4.0 saved March entries to April. It affected anyone who added entries between 2 and 6 August. Sorry. 2.4.1 is out now and repairs the dates on the way in, so update and open the app once. If a figure still looks wrong, open an issue and I'll go through it with you.

Asking for money

This is the tone most solo developers get wrong, in both directions: either apologetic and cheap, or suddenly corporate. GRU953 stays itself and states the number without a wobble. No hinting, no "whatever you think is fair", no burying the figure at the bottom.

Every figure below is a [placeholder] . Aninda must set his own real numbers before any of this copy is sent to a client.

Invoice covering note: Invoice [GRU953-2026-014] is attached, for the work agreed on [14 July]: the offline sync and the two report screens. The total is BDT [amount], due [30] days from today. Bank details are on the invoice. Anything unclear, ask me. I'll amend it the same day.

Reply to a paid licence enquiry: Happy to help. The design system itself is free under Apache-2.0. You can use the colours, tokens and CSS in a commercial product, with no payment and no permission needed. The guidebook and the written templates are a different matter — those are PolyForm Noncommercial, so commercial use of the writing needs a quick word with me first. What isn't free at all is the GRU953 name and the bird mark. Those stay with the studio. If what you want is the system fitted to your own product and brand, that is paid work. My rate is BDT [rate] an hour, and a job like that is usually [range] hours. I'll quote a fixed price once I've seen your screens.

3. Words we use, words we avoid

Words we use

Not a vocabulary to sprinkle on. These are the words that carry GRU953's meaning, so reach for them first.

simple, simpler	The brand's own claim. "Simpler" is stronger than "simple" because it invites a comparison.
works / doesn't work	The plainest verdict there is. "It works offline." "Search doesn't work on very old Androids."
free , and what it is free of	Never bare. "Free to use. No account, no advert, no data leaves your phone."
offline	A real, checkable property, and central to who the apps are for.
Bangla and English	Written out, in that order, when talking about the apps. Not "localised" or "i18n" to a non-technical reader.
old phone, slow connection	Names the actual reader instead of "low-resource environments".
small	A virtue here, not an apology. "A small app that does one thing."
fix, fixed, broke	Say "I broke it" and "I fixed it". Not "an issue was identified and remediated".
limit	"Here is the limit." A named limit builds more trust than a hidden one.
try	Low-commitment invitation. "Try it for a week."
you, your	Second person, always. "Your entries stay on your phone."
I (Aninda) and GRU953 (the studio)	"I" for the person doing the work, "GRU953" for the studio and its products. Never a royal "we" pretending to be a team. In app copy, use neither: say what happened. "Your entry didn't save", not "we couldn't save it".
not yet	Honest about the future without promising it. "There's no cloud backup yet."
sorry	Once, on its own line, when it is deserved. Then stop.
plain	"In plain words." Signals the effort we make.

WORD OR PHRASE	HOW WE USE IT
open	Only about the licence, and always with the name: "open under Apache-2.0".
a number	Any claim about speed, size, price, or dates arrives with its figure attached.

Words we avoid

Every avoid has a reason, and the reason is the rule. In the "say instead" column, anything in square brackets is a blank you fill with a real, measured figure. The shape is the lesson, not the number.

AVOID	WHY	SAY INSTEAD
blazing fast, lightning fast	A speed claim with no number is decoration.	"Opens in [0.8]s on a [Redmi 9A], measured over ten runs."
seamless, frictionless	Nobody can check it, and it usually means "we removed a step" without saying which.	"No sign-up screen."
revolutionary, game-changing	The reader decides that, not us; claiming it costs us credibility instantly.	"Does one thing: [the thing]."
cutting-edge, next-generation	Dates badly and says nothing about what the thing does.	Name the actual thing: "Built with [tool], [year]."
leverage, utilise	Long words doing a short word's job.	"use"
robust, enterprise-grade	Vague reassurance where a fact belongs.	"[N] tests. Running since [month year], no data loss reported."
delightful, magical, beautiful	Claims a feeling on the reader's behalf.	Show a screenshot and let them decide.
simply, just ("just click Export")	If it were simple they wouldn't be reading; it makes a stuck person feel stupid.	"Click Export."
obviously, of course, as you know	Same problem, ruder.	Delete the word.
unfortunately	A cushion before bad news that delays the news.	Lead with the news, then the reason.
we're excited to announce	Our mood is not the update.	"[version] adds [what it adds]."
best-in-class, world-class,	Superlatives we cannot verify, and a one-person	Say what it does and let it stand.

AVOID	WHY	SAY INSTEAD
industry-leading	studio least of all.	
solution, offering	Hides what the thing is.	Name it: "an app", "a script", "a CSS file".
users at scale, synergy, ecosystem	Consultant filler. Nobody talks like this.	"people who use it"
AI-powered (as a headline)	Describes our plumbing, not their benefit.	"Reads a photo of a receipt and fills the amount in."
100% secure, bug-free, never fails	Absolutes no software can honour, so the first failure makes us liars.	"Encrypted on the phone. If you find a hole, tell me."
free forever, lifetime guarantee	A promise about a future one person cannot control.	Tie it to the licence, which is the part that really cannot be taken back: "Free today, under Apache-2.0. An Apache-2.0 licence already granted cannot be withdrawn."
sorry for any inconvenience caused	A formula, not an apology; it apologises to nobody in particular.	"Sorry. This cost you an afternoon's entries."
please be patient, please bear with us	Moves the burden onto the person we let down.	"Fixed by Friday. I'll reply here."
hey guys, hey folks	Assumes a crowd and a gender.	"Hello," or nothing at all.
coming soon, on the roadmap	Undated promises that quietly become debts.	"Not planned." Or a month you mean: "Aiming for [month year]."
an emoji standing in for a word	It carries no meaning for a screen reader, and half the audience reads it differently.	Write the word.
Gru953, GRU 953, gru-953 in prose	BRAND-SPEC: the brand is GRU953 , one word, uppercase. Lowercase is a filename convention only.	GRU953

4. Elevator description at three lengths

Word counts are exact and were counted on 12 August 2026. Two things before you use them. They are drafts until Aninda approves them. The two longer ones describe apps, so they are only fully true once at least one app is public. Until then, use the 12-word line.

12 words

GRU953 is a one-person software studio: simple, honest tools for old phones.

30 words

GRU953 is the studio name of Aninda Sundar Howlader, a solo developer in Bangladesh. He builds small bilingual tools that stay understandable, name their limits, and hide nothing from you.

90 words

GRU953 is a one-person software studio run by Aninda Sundar Howlader from Bangladesh. It exists because most software assumes a fast phone, a good connection, an English reader, and money to spare. GRU953 assumes none of that. Every app is built to be understood on first use. Each one works in Bangla and English from the first screen, and names its limits plainly, up front. The design system behind the apps is published under Apache-2.0, so anyone can build on it. The brand marks are not.

Each one names GRU953 and then says what it is, which is the first-mention rule from section 1 doing its job.

5. Bios, ready to paste once Aninda has checked them

Counts below were measured on 12 August 2026. **Two warnings before you paste anything.**

One: no invented numbers. None of these bios contains a speed, size or price claim, on purpose. If you want to add one, measure it first and write the figure and the device, as section 1 requires.

Two: platform limits move. Both limits quoted below were checked on 12 August 2026. GitHub's 160-character bio limit is **verified** against GitHub's own documented field limit. LinkedIn's 220-character headline limit is **verified against several independent third-party references, not LinkedIn's own documentation**, which does not state it plainly. Treat 220 as reliable but not official. Re-check both before any rewrite, because platforms change them without notice.

GitHub profile bio (limit 160 characters)

GRU953 · a one-person software studio in Bangladesh. I build small, honest tools in Bangla and English, for old phones. Simple technology. For everyone.

152 characters. GitHub's bio field allows 160.

This version names GRU953 and says what it is in the first six words. That matters more here than anywhere else. The GitHub handle is `GRU-953`, so this bio is the one line standing between a visitor and reading the name as a machine-learning model.

GitHub profile README intro paragraph

Hello, I'm Aninda. I write software on my own, under the name GRU953, from Bangladesh. The work is small tools built for people the industry tends to skip: someone on a five-year-old Android, on a patchy connection, reading Bangla. So the apps here work offline, and speak both languages from the first screen. The design system I build them with is open under Apache-2.0, so take any of it. The pinned repositories below are the ones worth your time first.

84 words. Delete the last sentence until you have actually pinned repositories, or it points at nothing.

LinkedIn headline (limit 220 characters)

Solo software developer · GRU953, my one-person software studio · I build simple, offline-first apps in Bangla and English for people on old phones and slow connections · Open design system, honest scope

203 characters. LinkedIn allows 220. "Offline-first" means the app is built to work with no network at all. A connection is a bonus, not a requirement.

LinkedIn About (150–200 words)

I build software on my own, under the studio name GRU953, from Bangladesh.

Most tools quietly assume a fast phone, a steady connection, an English reader and money to spare. A great many people have none of those, and they are the people I build for. In practice that means apps that keep working with the network switched off. They read equally well in Bangla and English, because the Bangla is written as Bangla and not run through a translator.

I work end to end. I talk to the person who will use the thing, design it, build it, ship it, and answer the bug reports myself. I keep scope honest. If a job needs a team, I say so.

The GRU953 design system — its colour tokens, type scale and stylesheets — is published openly under Apache-2.0 for anyone to use commercially.

Open to product work, contract builds and collaborations. Simple technology. For everyone.

156 words. Two lines are Aninda's to confirm, not mine to assert. Delete "Open to product work, contract builds and collaborations" if you are not currently looking for work. The paragraph about the published design system becomes true on the day the kit actually goes public. Until then, cut it, or write "will be published under".

CV personal statement (60–80 words)

Solo developer with a bias for small, finished things. I design, build and support complete applications on my own, from the first conversation to the bug reports. I do it for people on old phones and slow connections, in Bangla and English. I keep scope honest and name limits early. My own design system is published under Apache-2.0. I would rather ship one clear screen than five clever ones.

73 words. "Complete applications" is a claim about your record, so only use the plural if the CV lists at least two. With one, write "a complete application". With none yet, cut the sentence.

Email signature descriptor (one line)

Aninda Sundar Howlader · GRU953, a one-person software studio · simple

software, one thing at a time

100 characters.

6. How GRU953 writes the recurring things

Read this before copying anything below. Every example here uses an imaginary app called "Ledger". Every file size, speed, version number, date, error code and package name in it is invented. All of it is **unverified** and none of it may be published. The examples show the shape of the writing. The rules are the deliverable.

Commit messages

Rules. Subject line in the imperative ("add", "fix", not "added", "fixes"), under 50 characters, no full stop. If the reason is not obvious from the code, put it in the body after a blank line and say *why*, not *what*. Never "fix stuff", "wip", "final", or a bare emoji.

Example 1, a fix:

Fix month rollover in date picker

Months with fewer than 31 days rolled into the next month, so a 30 March entry saved as 30 April. Clamp the day to the month's length before saving. Broken since 2.3.0.

Example 2, a deliberate removal:

Remove multi-shop switcher

Two shops needed a third screen and a settings menu, which is more than the app is for. Two profiles do the same job. Closes #48.

Release notes

Rules. Version and date on the first line. One sentence on who should care. Then fixed headings in this order, dropping any that are empty: **Fixed**, **Added**, **Changed**,

Known limits. Every performance or size claim carries its number. Bad news goes at the top, not the bottom. No "we're excited".

Example 1, a patch:

2.4.1 – 8 August 2026

Update if you added entries between 2 and 6 August. This release repairs dates that 2.4.0 sav into the wrong month.

****Fixed****

- March entries saved as April. Existing wrong dates are corrected when you next open the app
- Export crashed when the shop name contained a comma.

****Known limits****

- Entries you already exported to CSV are not corrected. Export again after updating.

Example 2, a feature release:

2.5.0 – 3 September 2026

Adds photo receipts. Nothing else changes, and no existing data moves.

****Added****

- Attach a photo to any entry. Photos stay on the phone and are never uploaded.

****Changed****

- The app is 2.1 MB larger (7.4 MB, up from 5.3 MB) because of the image library.

****Known limits****

- One photo per entry.
- Photos are not included in CSV export yet.

Error messages people actually see

Rules. Three parts, in this order: **what happened, why (only if we actually know), what to do now.** Reassure about their data if it is safe. Never blame the person, never say "invalid", never show a raw stack trace. Add a short code at the end only if it helps a search. Under 30 words in English. The Bangla line is written as Bangla by the Bangla lead, not translated from this.

Example 1, storage:

Couldn't save. The phone has no space left. Free up about 20 MB and tap Save again. What you typed is still here. (E-14)

Example 2, a rejected file:

This file didn't open. Ledger reads .csv files, and this one is .xlsx. Save it as CSV in your spreadsheet app and try again. (E-31)

Not: "Invalid file format." Not: "An unexpected error occurred."

README opening paragraphs

Rules. The first paragraph answers three questions and nothing else: **what is this, who is it for, what does it cost.** Three sentences, maximum four. No badges above it, no logo wall, no "Table of Contents" before the reader knows what the thing is. A screenshot comes straight after. Then install.

Example 1, an app:

Ledger keeps a record of daily takings for a one-person shop. It works offline on Android 7 and up, in Bangla or English, and there is no account to create. Free, Apache-2.0 licensed, 5.3 MB.

Example 2, a library:

gru953-tokens is the colour and type token set behind GRU953's apps: five colour families in OKLCH, a full set of semantic roles for light and dark, and the CSS variables to use them. It's for anyone building an interface who wants contrast ratios that already pass WCAG 2.2 AA. Apache-2.0, no dependencies, 11 kB.

Issue replies

Rules. Four moves, in order. Thank them. Restate the problem in your own words, so they know you understood. Say what you now know. Then commit to one next step with a date, or say plainly that you won't do it. Never leave an issue with no next step. If you cannot reproduce it, say exactly what you tried.

Example 1, a confirmed bug:

Thanks for the detail, the screenshot made this quick. Confirmed: entries dated the 31st of a 30-day month move to the following month. It's been wrong since 2.3.0, which means some saved dates are already affected, so the fix has to repair old rows as well. I'm on it this week and will reply here when 2.4.1 is out.

Example 2, a feature request being declined:

Thank you, and I can see why you'd want multi-shop support. I'm not going to add it. Ledger is deliberately two screens, and shops brings a switcher, a settings menu and a data model that undoes that. The workaround that does work today: install Ledger under a second Android user profile, one shop each. Closing this, but the reasoning is here if anyone wants to argue with it.

7. Naming rules for future products

GRU953 is a **parent brand over individually-named apps** (BRAND-SPEC §1). So the app's own name does the work, and GRU953 stands behind it as the maker. In practice that means the **endorsement form**, not the **prefix form**.

Those two terms in plain words. The **endorsement form** puts the product first and credits the maker after it: "Ledger by GRU953". The **prefix form** puts the maker first and treats the product as its sub-brand: "GRU953 Ledger".

This was an open decision. It is now settled: the endorsement form wins.

The two candidates were `<Name> by GRU953` (the **endorsement form** — product first, maker credited after) and `GRU953 <Name>` (the **prefix form** — maker first, product as a sub-brand).

The endorsement form is the default because BRAND-SPEC §1 says GRU953 is a parent brand over *individually-named* apps. The prefix form contradicts that: it makes every app a sub-brand rather than a name of its own. It is also the safer order to teach — a name that already stands alone can have the maker's name put in front of it later, whereas a name people first learn as "GRU953 Ledger" never fully becomes "Ledger".

The prefix form is still correct in one case: when the product's name is too generic to stand alone in a listing — "GRU953 Notes" reads better than "Notes by GRU953" in an app store search result. Never both forms in the same document.

`08_guidebook/chapters/name.md` states the same rule. If the two ever disagree again, BRAND-SPEC §9 is the tie-breaker.

The written form

WHERE	FORM	EXAMPLE
First mention anywhere in prose	<Name> by GRU953	"Ledger by GRU953 keeps a record of daily takings."
Every mention after the first	<Name> alone	"Ledger works offline."
App store or directory listing title	<Name> by GRU953	"Ledger by GRU953"
Inside the app's own interface	<Name> alone, with the bird mark	"Ledger"
Repository, package, folder, domain	lowercase, hyphens	gru953-ledger , ledger.gru953.dev
Legal, invoices, licence headers	<Name>, a GRU953 product	"Ledger, a GRU953 product"

The domain in the fifth row shows the shape only. `gru953.dev` was checked on 12 August 2026 and is **not registered to anyone**, GRU953 included (see `08_guidebook/chapters/name.md`). Do not print it anywhere public until it has been bought.

Use the prefix form `GRU953 Ledger` **only** for a name too generic to stand alone: a bare common noun such as "Notes" or "Timer". If you find yourself needing the prefix often, the name is the problem, not the rule.

Never write: `GRU953Ledger` · `Gru953 Ledger` · `GRU-953 Ledger` · `GRU953's Ledger` · `Ledger by gru953` in prose · the app name merged into the wordmark's letterforms.

In the lockup (the fixed arrangement of bird plus wordmark that ships as one file): the bird and the GRU953 wordmark stay exactly as drawn. The app name is separate text set in Sora Regular, at 60–70% of the wordmark's height, in Ink or Paper. It never becomes part of the wordmark and never changes the wordmark's spacing.

It also sits **outside the logo's clear space**. `02_strategy/DESIGN-RULES.md` §1.3 fixes that space at half the mark's own height on all four sides, and nothing may enter it. So the app name goes below or beside the lockup with that gap kept clear, never tucked up against it. The 60–70% figure is this file's proposal for the text, not

a locked design decision. The design workstream owns the final geometry, so confirm it there before any artwork is cut.

The five-question test, before a name is chosen

1. **Phone test.** Can you say it once, on a bad line, and have it typed correctly with no spelling?
2. **Bangla mouth test.** Does it sit comfortably in a Bangla sentence, said by a Bangla speaker, and does it mean nothing unfortunate in Bangla?
3. **Plain-noun test.** Does it tell a stranger roughly what the thing does, or at least not mislead?
4. **Two-syllable test.** Two syllables ideally, three at most. People shorten anything longer, and then they own the name, not you.
5. **Availability check.** Search the trademark register, the package registries (npm and PyPI), the domain and GitHub. Write down what you found, and the date you found it. Until that is done, the name is "unverified" in internal notes. Nothing here can be checked in advance for an app that does not exist yet, so this step is always Aninda's, and always dated. `name.md` shows the format: what was checked, the result, and how confident the result is.

What makes a bad name here

BAD NAME PATTERN	WHY IT IS BAD FOR GRU953	EXAMPLE TO AVOID
Invented tech-sounding words	Says nothing, and needs explaining every single time.	"Zynthara"
Dropped or swapped vowels	Fails the phone test on the first call.	"Ledgr", "Trakit"
-ify , -ly , -io , -hub suffixes	Dated startup dressing; contradicts a plain voice.	"Ledgerly", "Tallyify", "Ledger.io"
"AI" or "Smart" in the name	Describes plumbing, dates fast, and promises something the app must then prove.	"SmartLedger AI"
A version or year baked in	Guarantees the name is wrong later.	"Ledger 2026", "NextLedger"
Longer than three syllables	Gets shortened by users into something you did not choose.	"Accountability Companion"
English-only puns or wordplay	Dies in translation and breaks the bilingual promise.	"Sum Thing Else"
A word already owned by a large product	A fight GRU953 cannot afford, and confusing besides.	"Sheets", "Wallet", "Vault"
Reusing "GRU" or "953" inside the app name	Dilutes the parent mark and reads as a serial number.	"GRU Ledger 953"
A name that needs the tagline to make sense	If it only works with a sentence attached, it isn't the name.	"Everyone"

The one rule, applied to naming: given two workable names, take the plainer one.

Appendix: the quick check before anything is published

1. Is there a claim without a number, a date, or a limit? Add one or cut the claim.
2. Is any number in it a real measured one, not an example copied out of this file?
3. Is there a word from the avoid list? Replace it.

4. Read it aloud. Would you say this to a person? If not, rewrite.
5. Is the brand written GRU953 , one word, uppercase?
6. Does the first mention of GRU953 say what GRU953 is, right after the name?
7. If this surface is bilingual, has the Bangla been written as Bangla, not translated?

Seven checks, so call it fifteen seconds rather than ten. It is still the cheapest fifteen seconds in the whole kit.

Writing in Bangla

বাংলায় লেখা

GRU953 — বাংলা ভাষার পরিচয় / Bangla Verbal Identity

GRU953 · 12 আগস্ট 2026 · বাঁধা হয়েছে 02_strategy/BRAND-SPEC.md -এর উপর

For Aninda, in English first: this is the rulebook for how GRU953 sounds in Bangla. It is not a translation of the English voice guide. Bangla here is written the way a Bangladeshi developer actually writes, so it reads as an original, not as output from a machine. Every Bangla example below is publication-ready — you can copy it straight into a product, a README or a post.

The one rule above all still applies: when this guide offers a choice, choose the simpler option. / যেখানেই দুটো পথ, সহজটা বেছে নিন।

0. এক নজরে / The card version

Register	চলিত (modern standard Bangla). Never সাধু. Bangladeshi standard, not Kolkata.
Addressing the user	আপনি, always. Never তুমি, never তুই.
The brand's "we"	আমরা. Aninda writing personally uses আমি.
Sentence end	দাঁড়ি (।) — never a Latin full stop.
Numerals	Latin 0–9, including inside Bangla sentences. GRU953 never becomes GRU৯৫৩.
Brand name in Bangla text	GRU953 — Latin, uppercase, suffix with a hyphen: GRU953-এর
Tagline	সহজ প্রযুক্তি। সবার জন্য।

1. ব্র্যান্ডের কণ্ঠস্বর / The voice in Bangla

Four attributes. Each one comes from a real developer situation, and each has a "we say it this way" and a "we don't say it this way".

1. সহজ ও পরিষ্কার (Simple and clear)

সবচেয়ে সহজ শব্দটাই বেছে নিন। এক বাক্যে এক কথা।

- **এভাবে বলি:** "এই অ্যাপ ইন্টারনেট ছাড়াই চলে। আপনার কাজ ডিভাইসেই থাকে।"
- **এভাবে বলি না:** "একটি অত্যাধুনিক অফলাইন-ফাস্ট আর্কিটেকচারের মাধ্যমে ডেটা পার্সিস্টেন্স নিশ্চিত করা হয়েছে।"

Why: the second sentence is four English words in Bangla clothing. It tells the reader nothing they can act on.

2. যত্নশীল (Considerate)

পাঠক কী জানেন না, সেটা ধরে নিয়ে লিখুন — কিন্তু তাঁকে ছোট করে নয়।

- **এভাবে বলি:** "রিপোজিটরি (repository) মানে কোড রাখার ফোল্ডার। প্রথমে সেটাই কপি করে নিতে হবে।"
- **এভাবে বলি না:** "সবাই জানে রিপো ক্লোন করতে হয়। শুধু `git clone` মারুন।"

Why: "সবাই জানে" tells the one reader who doesn't that they don't belong.

3. সৎ ও স্পষ্ট (Honest and plain)

যা পারি না, সেটাও বলি। সীমা লুকোই না। সংখ্যা থাকলে সংখ্যাটাই লিখি।

- **এভাবে বলি:** "এখন শুধু বাংলা আর ইংরেজি আছে। আরও ভাষা যোগ করার পরিকল্পনা আছে, তবে কোনো তারিখ দিতে পারছি না।"
- **এভাবে বলি না:** "শীঘ্রই সব ভাষা সাপোর্ট করবে!"

Why: "শীঘ্রই" with no date is a promise the brand cannot keep. GRU953 does not make those.

4. কারিগরি নিষ্ঠা (Craft)

বাড়তি উত্তেজনা নেই, কিন্তু কাজটা যত্নে করা — এবং সেটা লেখাতেও বোঝা যায়।

- **এভাবে বলি:** "লোগোর তিনটি আলাদা ভার্শন আছে — বড়, মাঝারি আর ছোট মাপের জন্য। 16px-এ একটাই ড্রয়িং কাজ করে না।"
- **এভাবে বলি না:** "আমাদের লোগো ইন্ডাস্ট্রি-লিডিং, পিক্সেল-পারফেক্ট এবং সম্পূর্ণ ফিউচার-প্রুফ!"

Why: the first sentence proves the care by explaining the reason. The second only asserts it.

দুটো জিনিস সব সময় বাদ: অতিরঞ্জন (hype) আর ভয় দেখিয়ে কাজ আদায় (dark patterns).
কোনো "এখনই!", কোনো "শেষ সুযোগ!", কোনো লুকোনো শর্ত।

2. রেজিস্টার / The register decision

First, in plain English

Bangla is written in two registers — two different levels of formality:

- **সাধু (sadhu)** — the old literary register. Longer verb forms and older pronouns: *করিয়াকে, বলিতেছেন, তাহার, ইহা*. It belongs to 19th and early 20th century literature and to some old legal and government documents. To a modern reader it sounds like Shakespearean English does to us: dignified, and completely wrong for a button.
- **চলিত (cholit)** — the modern standard written register, based on educated everyday speech: *করেছে, বলছেন, তার, এটা*. Every Bangladeshi newspaper, publisher, website and app uses it.

Important: চলিত is **not** slang and **not** regional dialect. It is the neutral standard. Regional speech (Dhakaiya, Barishali, Sylheti) is a third thing, and GRU953 does not use it in product or brand writing.

The decision

GRU953 writes in চলিত ভাষা, always. সাধু is never used — not in headlines, not in legal text, not for effect.

Three reasons: চলিত is what the reader thinks in; সাধু puts distance between the brand and the reader, which contradicts "সবার জন্য"; and mixing the two inside one product is the single most common mark of amateur Bangla writing.

Two further rulings that follow from the same logic:

1. **Bangladeshi standard, not Kolkata standard.** Where the two differ, take the Dhaka word: পানি (not জল), গোসল (not স্নান), খোঁজা / সার্চ (not অন্ত্রেষণ).
2. **Avoid heavy Sanskritised (তৎসম) vocabulary** even though it is technically চলিত. Prefer the everyday word: সমস্যা over ক্রটি, অনুমতি over অনুমোদন, শুরু over আরম্ভ, জায়গা over স্থান.

আপনি / তুমি — decided

আপনি. Every time. For every reader — user, contributor, recruiter, client, stranger.

- **তুমি is never used** in product interfaces, documentation, READMEs, error messages, marketing or email.
- **তুই is never used** at all.

Why, in one line each: আপনি is the neutral respectful form and is safe for everybody, from a teenager to Aninda's grandmother. তুমি to an adult you have not met reads either as unearned intimacy or as talking down — and there is no way to know in advance which one a given reader will feel. Some youth brands take that risk deliberately; GRU953 does not, because "প্রত্যেক ব্যবহারকারীর যত্ন" includes the reader who would be offended.

What this means mechanically. The verb ending carries the form, so getting it wrong is visible everywhere:

	আপনি (USE THIS)	তুমি (NEVER)
Save	সেভ করুন	সেভ করো
Look / see	দেখুন	দেখো
Do you want to...?	আপনি কি ... চান?	তুমি কি ... চাও?
You are signed in	আপনি সাইন ইন করেছেন	তুমি সাইন ইন করেছ

The brand's own voice is আমরা ("আমরা কোনো ডেটা সংগ্রহ করি না।"). Use আমি only where Aninda is genuinely speaking as himself — a personal blog post, a bio, a commit message. Never mix আমি and আমরা inside one document.

Impersonal is allowed, and often kinder. "সেভ করা যায়নি।" blames nobody and is natural Bangla. Prefer it over "আপনি সেভ করতে ব্যর্থ হয়েছেন।"

3. কারিগরি শব্দের নীতি / Technical vocabulary policy

The three tiers

Tier 1 — keep the English, in Latin script. Proper nouns, code, and anything a reader will type or search for: `GitHub`, `Apache-2.0`, `PolyForm-Noncommercial-`

1.0.0 , README.md , Ctrl , git clone , .webp , #B45A39 , okLch() . Never transliterate these into Bangla script.

Tier 2 — the English word, written in Bangla script. This is the default and the largest bucket. Everyday computing words that Bangladeshis already say in English, so writing them in Bangla letters is the honest record of real speech: ফাইল, ফোল্ডার, ডাউনলোড, আপডেট, পাসওয়ার্ড, ব্যাকআপ, ডার্ক মোড, সেটিংস.

Tier 3 — a genuine Bangla word. Only where a real Bangla word is what people actually say: গোপনীয়তা, অনুমতি, সমস্যা, জায়গা, খোঁজা, মুছে ফেলা, বাতিল, সাহায্য.

Both, once. For a term a general user may not know, give the GRU953 form, then the English in brackets, **on first use only** — never again in the same document: "অ্যাকসেসিবিলিটি (accessibility) — অর্থাৎ প্রতিবন্ধকতা থাকলেও যেন ব্যবহার করা যায়।"

The two hard prohibitions

1. **Never coin a new Bangla compound.** Do not write সংগ্রহশালা for *repository* or গণনাযন্ত্র for *computer*. If a word had to be invented for this document, it is wrong.
2. **The out-loud test.** Would a developer in Dhaka say this word aloud to a colleague? If no, do not write it. This single test settles almost every argument.

শব্দকোষ / Glossary — GRU953-approved renderings

ENGLISH	GRU953 BANGLA	TIER	নোট / NOTE
file	ফাইল	2	নথি is Indian-formal and wrong here.
folder	ফোল্ডার	2	ডিরেক্টরি only in developer/CLI context.
download	ডাউনলোড (করুন)	2	Always with করুন in a button.
upload	আপলোড (করুন)	2	Same pattern as download.
settings	সেটিংস	2	Plural form as spoken; not সেটিং.
error (user-facing)	সমস্যা	3	ত্রুটি is stiff; এরর is fine dev-to-dev only.
update	আপডেট	2	হালনাগাদ is government register — avoid.
password	পাসওয়ার্ড	2	Never গুপ্তশব্দ.
offline	অফলাইন	2	Explain once: "ইন্টারনেট ছাড়া".
sign in	সাইন ইন (করুন)	2	Mirror the English UI: if it says Log in, write লগ ইন.
sign out	সাইন আউট	2	Bare, no করুন — it is a dismissive action.
privacy	গোপনীয়তা	3	Real Bangla, universally understood.
licence	লাইসেন্স	2	Licence names stay Latin: Apache-2.0, PolyForm Noncommercial 1.0.0.
open source	ওপেন সোর্স	2	Gloss once: "কোড সবার জন্য খোলা".
repository	রিপোজিটরি	2	রিপো only in informal dev chat.
bug	বাগ	2	Gloss once: "সফটওয়্যারের ভুল".
release	রিলিজ	2	প্রকাশ only for written content, not software.

ENGLISH	GRU953 BANGLA	TIER	নোট / NOTE
accessibility	অ্যাকসেসিবিলিটি	2	Always gloss on first use — the word is long and new to many.
dark mode	ডার্ক মোড	2	And লাইট মোড. Not অন্ধকার মোড.
storage	স্টোরেজ	2	But "জায়গা" when you mean free space: "জায়গা ফুরিয়ে এসেছে".
backup	ব্যাকআপ	2	Never প্রতিলিপি.
permission	অনুমতি	3	OS permissions too: "ক্যামেরার অনুমতি".
save	সেভ (করুন)	2	সংরক্ষণ করুন is acceptable in formal documents only.
delete	মুছে ফেলুন	3	Natural and unambiguous. Never ডিলিট করুন in UI.
cancel	বাতিল	3	Bare noun on a button; বাতিল করুন in a sentence.
search	খুঁজুন / সার্চ	3/2	খুঁজুন on the button, সার্চ when naming the feature.
share	শেয়ার (করুন)	2	Never বিতরণ.
notification	নোটিফিকেশন	2	বিজ্ঞপ্তি is newspaper register — avoid.
sync	সিঙ্ক (হচ্ছে)	2	"নিজে থেকেই সিঙ্ক হয়ে যাবে".
install	ইনস্টল (করুন)	2	Never স্থাপন.
version	ভার্সন	2	The number itself stays Latin: 2.5.0.
account	অ্যাকাউন্ট	2	Note the আ-kar: অ্যা, not এ্যা.
data	ডেটা	2	Spell ডেটা, not ডাটা. Pick one and never vary.
loading	লোড হচ্ছে	2	Add what is loading if you can.
retry	আবার চেষ্টা করুন	3	Three words is fine; clarity wins.

ENGLISH	GRU953 BANGLA	TIER	নোট / NOTE
contributor	কনট্রিবিউটর	2	অবদানকারী acceptable in a thank-you line.
feature	ফিচার	2	Never বৈশিষ্ট্য in product copy.
dependency	ডিপেনডেন্সি	2	Developer-facing only; gloss for general readers.

Spelling consistency is part of the brand. Where Bangla allows two spellings, GRU953 fixes one: **ডেটা** (not ডাটা) · **রিপোজিটরি** (not রিপোজিটোরি) · **অ্যাকাউন্ট** (not এ্যাকাউন্ট) · **কোনো** (not কোন, when it means *any*) · **নেই** (not নাই).

4. ট্যাগলাইন ও তিন স্তম্ভ / Tagline and the three pillars

ট্যাগলাইন (locked, part of the system)

সহজ প্রযুক্তি। সবার জন্য।

Two sentences, two দাঁড়ি. The pause between them is the point — do not replace the first দাঁড়ি with a comma in the canonical form, and never drop the second one.

Two shorter phrasings, for tight spaces. Use these only where the locked form will not fit — a single-line footer, an OG image strip, a badge, a business-card edge.

1. **সবার জন্য সহজ প্রযুক্তি** — one line, no punctuation. The most natural Bangla word order; reads as a phrase, not a slogan. Use this as the default short form.
2. **সহজ প্রযুক্তি, সবার জন্য** — one line, comma. Keeps the two-part rhythm of the original in half the height. Use where the pause matters.

Nothing shorter is approved. Do not abbreviate to "সহজ প্রযুক্তি" alone — that drops "সবার জন্য", which is the half that carries the promise.

তিন স্তম্ভ / The three pillars

ENGLISH (LOCKED)	GRU953 BANGLA
Simple by design	গোড়া থেকেই সহজ
For everyone	সবার জন্য
Honest craft	সৎ কারিগরি

Honesty note: BRAND-SPEC.md carries the three pillars forward in English only. No earlier Bangla wording is recorded there, so I cannot verify what it was — **unverified**. The Bangla above is set here as canonical for GRU953. If an earlier Bangla wording exists in Aninda's own files and differs, he decides which one stands.

চার মূল্যবোধ / The four values

Simplicity first · Care for every user · Honesty · Craft সহজটাই আগে · প্রত্যেক ব্যবহারকারীর যত্ন · সততা · কারিগরি নিষ্ঠা

উদ্দেশ্য / Purpose, in Bangla

GRU953-এর কাজ একটাই: সত্যিকারের সহজ আর সৎ প্রযুক্তি বানানো, যা যে কেউ ব্যবহার করতে পারেন — টাকা, ভাষা বা সামর্থ্য যেমনই হোক।

5. যেগুলো বারবার লিখতে হয় / The recurring things

5.1 সমস্যার বার্তা / Error messages

Shape: কী হয়েছে → কেন (জানা থাকলে) → এখন কী করবেন। কোনো দোষারোপ নয়, কোনো "Oops!" নয়।

1. ইন্টারনেট সংযোগ পাওয়া যাচ্ছে না। আপনার কাজ এই ডিভাইসেই সেভ আছে — সংযোগ ফিরলে নিজে থেকেই সিল্ক হয়ে যাবে।

2. ফাইলটি খোলা গেল না। ফরম্যাটটি সম্ভবত সমর্থিত নয় — এখন `.png` , `.jpg` আর `.webp` পড়া যায়।
3. পাসওয়ার্ড মিলছে না। আবার চেষ্টা করুন, বা পাসওয়ার্ড রিসেট করুন। টানা 5 বার ভুল হলে অ্যাকাউন্ট 15 মিনিটের জন্য বন্ধ থাকবে।
4. সেভ করা যায়নি। ডিভাইসে জায়গা নেই — দরকার 40 MB, আছে 12 MB। কিছু জায়গা খালি করে আবার চেষ্টা করুন।
5. আমরা ঠিক জানি না কী হয়েছে। এটুকু নিশ্চিত: ফাইলটি সেভ হয়নি, আর আগের সেভ করা কাজ অটুট আছে। চাইলে লগ পাঠিয়ে আমাদের সাহায্য করতে পারেন।

এভাবে বলি না: "কিছু একটা ভুল হয়েছে!" · "Error 500" খালি অবস্থায় · "দুঃখিত, আপনি ভুল করেছেন।" · "অজানা ত্রুটি সংঘটিত হয়েছে।"

Example 5 is the honesty rule doing real work: it says what is unknown, then states the two things that are known.

5.2 খালি অবস্থা / Empty states

Shape: কী নেই → কেন → একটাই পরবর্তী পদক্ষেপ।

1. এখনও কোনো প্রজেক্ট নেই। প্রথমটা তৈরি করলে এখানেই দেখতে পাবেন।
[নতুন প্রজেক্ট]
2. এই নামে কিছু পাওয়া যায়নি। বানানটা দেখে নিন, বা কম শব্দ দিয়ে খুঁজুন।
3. ট্র্যাশ খালি। 30 দিনের পুরোনো জিনিস নিজে থেকেই মুছে যায়।

4. এখনও কোনো নোটিফিকেশন নেই। জরুরি কিছু হলে জানান — এর বেশি নয়।

এভাবে বলি না: "এখানে কিছু নেই :(" · "আপনার তালিকা শূন্য।" · অথবা একটা খালি সাদা পর্দা।

5.3 বাটন / Buttons

Rules. ক্রিয়া আগে। তিন শব্দের ভিতরে। মূল কাজে **করুন**, বাতিল-জাতীয় কাজে খালি শব্দ।

ধ্বংসাত্মক কাজে জিনিসটার নাম বলুন। বাংলায় ALL CAPS নেই, letter-spacing দেবেন না।

কাজ	বাটন
Primary save	সেভ করুন
Cancel	বাতিল
Delete (in a confirm dialog)	প্রজেক্ট মুছে ফেলুন
Download	ডাউনলোড করুন
Sign in	সাইন ইন করুন
Sign out	সাইন আউট
Retry	আবার চেষ্টা করুন
Continue	চালিয়ে যান
Back	ফিরে যান
Create new	নতুন প্রজেক্ট
See all	সব দেখুন
Copy	কপি করুন
Grant permission	অনুমতি দিন
Dismiss / later	এখন নয়
Acknowledge	বুঝেছি

এভাবে বলি না: ধ্বংসাত্মক কাজে শুধু "ঠিক আছে" · সেভ করার জন্য "জমা দিন" · "এখানে ক্লিক করুন" · "সাবমিট".

5.4 রিলিজ নোটের শুরু / Release note openings

Shape: নাম আর ভার্সন → তারিখ → এক লাইনে সবচেয়ে বড় বদলটা। পাঠক যেন প্রথম লাইনেই জানেন তাঁর জন্য এতে কী আছে।

উদাহরণগুলোর ভার্সন নম্বর কাল্পনিক — এগুলো আপনার নিজের অ্যাপের রিলিজ নোট কেমন দেখাবে তার নমুনা, ব্র্যান্ড কিটের কোনো ভার্সন নয়।

1. **2.5.0** — 12 আগস্ট 2026 এই রিলিজে বড় বদল একটাই: অফলাইনে থাকলেও এখন কাজ সেভ হয়। বাকিটা ছোট সারাই।
2. **2.5.1** — 3 সেপ্টেম্বর 2026 এই আপডেটে নতুন কোনো ফিচার নেই। তিনটি বাগ সারানো হয়েছে, আর অ্যাপটি চালু হতে আগের চেয়ে দ্রুত।
3. **3.0.0** — 1 নভেম্বর 2026 এটি একটি ব্রেকিং রিলিজ (breaking release — পুরোনো সেটিংস আর কাজ করবে না)। আপডেট করার আগে নিচের ধাপগুলো একবার পড়ে নিন।
4. **2.5.2** — 9 সেপ্টেম্বর 2026 ছোট রিলিজ, কিন্তু জরুরি। নিরাপত্তার একটি সমস্যা সারানো হয়েছে — যত দ্রুত সম্ভব আপডেট করে নিন।

এভাবে বলি না: "আমরা দারুণ উত্তেজিত যে..." · "নানা রকম উন্নতি ও বাগ ফিক্স" · "পারফরম্যান্স ব্যাপকভাবে উন্নত হয়েছে" (কত, বলুন — নাহলে লিখবেন না)।

6. বাংলা টাইপসেটিং নিয়ম / Bangla typesetting rules

6.1 সংখ্যা / Numerals — decided

GRU953 uses Latin numerals (0–9) everywhere, including inside Bangla sentences. Bengali numerals (০১২৩৪৫৬৭৮৯) are not used in GRU953 product,

brand or documentation text.

Justification — three reasons, in order of weight:

1. **The name would break.** GRU953 contains three digits that are part of a name, not a quantity. GRU৯৫৩ is a different string: it would not match a search, a URL, a package name or a `git grep`. Once the brand's own digits must be Latin, a second numeral system elsewhere in the same sentence is inconsistency, not localisation.
2. **Mixed numeral systems are a bug source.** Sorting, search, copy-paste into a spreadsheet, phone-number fields, `parseInt()`, and version comparison all behave differently for ০ and 0. One system means one fewer class of bug.
3. **The simpler option.** One numeral system, no per-context exception table. This is the "one rule above all" applied to a real fork.

Honest caveat: this is a judgement call, not a measured fact. Bangladeshi practice is genuinely mixed — government forms and school books use Bengali numerals; almost all software, banking and messaging uses Latin. GRU953 sits in software, so it follows software. If Aninda ever ships a purely cultural or editorial Bangla piece where Bengali numerals are the right choice, that is a named exception he grants deliberately — not a drift.

Units and symbols also stay Latin, joined to the number with a non-breaking space: **40 MB, 16px, 80%** — never ৮০%.

A note on this document itself: its section numbers are Latin (1, 2, 5.1) for exactly this reason. A guide that broke its own numeral rule on page one would not be worth following.

6.2 যতিচিহ্ন / Punctuation

- **দাঁড়ি (।)** ends every Bangla sentence. **Never** a Latin full stop. U+0964 DEVANAGARI DANDA is the correct character and is what Bangla keyboards produce.
- **Question mark (?) and exclamation (!)** are the Latin characters — this is standard Bangla practice. A Bangla question ends in ?, not in দাঁড়ি. GRU953 uses ! almost never.
- **Comma (,), colon (:), semicolon (;)** are the Latin characters, spaced as in English.
- **Quotation marks:** curly doubles — “এভাবে”. Do not use Bangla single quotes for emphasis.
- **Em dash (—):** allowed, sparingly, with spaces around it. One per paragraph at most. In Bangla it competes visually with the মাত্রা (the horizontal headline stroke over most letters), so it tires the eye faster than in Latin.
- **No space before দাঁড়ি**, one space after. কাজ শেষ। not কাজ শেষ ।
- **Ellipsis:** the single character ... (U+2026), not three dots.

6.3 তারিখ / Dates

- **In Bangla prose and UI:** Latin day, Bangla month name, Latin year — **12 আগস্ট 2026**. No comma, no ordinal suffix.
- **Month names (Gregorian, Bangla script):** জানুয়ারি · ফেব্রুয়ারি · মার্চ · এপ্রিল · মে · জুন · জুলাই · আগস্ট · সেপ্টেম্বর · অক্টোবর · নভেম্বর · ডিসেম্বর
- **In code, changelogs, filenames, metadata:** ISO only — **2026-08-12** — in both languages.
- **The Bangla calendar (বঙ্গাব্দ)** is not used for product, version or legal dates. It may appear in a purely cultural post, alongside the Gregorian date, never instead of it.
- **Times:** 24-hour in technical contexts (**14:30**); in prose, **বিকেল 2:30**.
- **Never** write a numeric-only date like 12/08/2026 — it is ambiguous across regions.

6.4 বাংলা বাক্যে GRU953 / "GRU953" inside a Bangla sentence

- Always **Latin, uppercase, unchanged:** GRU953 . Never গ্রু৯৫৩, never জিআরইউ৯৫৩, never "GRU 953" with a space.
- **Case markers and postpositions attach with a hyphen, no spaces:**

MEANING	FORM	EXAMPLE
of / possessive	GRU953-এর	GRU953-এর লোগো তিনটি মাপে আসে।
to / object	GRU953-কে	GRU953-কে নিয়ে লেখা হয়েছে।
in / at	GRU953-এ	GRU953-এ সব কিছু বাংলা আর ইংরেজিতে আছে।
from	GRU953 থেকে	GRU953 থেকে টেমপ্লেট নামিয়ে নিতে পারেন। (separate word, no hyphen)
and / with	GRU953 ও	GRU953 ও তার অ্যাপগুলো।

Use a plain ASCII hyphen-minus (-), not an en dash. Postpositions that are separate words in Bangla (থেকে, ও, দিয়ে, জন্য) stay separate, with a normal space and no hyphen. - **Said aloud in Bangla:** "গ্রু-নাইন-ফাইভ-থ্রি" — one word, the digits named individually, exactly as in English. Never "গ্রু নয়শো তিপ্পান". - Keep GRU953-এর on one line: wrap it in `white-space: nowrap` or join with a non-breaking space. A line break between GRU953- and এর looks like a hyphenated word and misreads. - **Typeface:** inside Bangla running text, GRU953 should render in the Latin face, not a fallback. Order the stack so Latin is found first and Bangla falls through to the Bengali face:

```
css /* body */ font-family: "Noto Sans", "Noto Sans Bengali", sans-serif; /* display */ font-family: "Sora", "Anek Bangla", "Noto Sans Bengali", sans-serif; /* code */ font-family: "JetBrains Mono", "Noto Sans Bengali", monospace;
```

Noto Sans has no Bengali glyphs, so Bangla characters automatically fall to Noto Sans Bengali while Latin letters and digits come from Noto Sans. This is the intended behaviour, not a hack.

6.5 লাইন ভাঙা ও যুক্তাক্ষর / Line-breaking and conjuncts

Bangla joins letters into যুক্তাক্ষর (conjuncts) — জ, ক্ষ, ন্দ্র, ষ্ট, স্প — single visual units built from several code points plus an invisible হসন্ত. Break one and you get either a nonsense glyph or a visible হসন্ত hanging in mid-air. The rules below all protect that.

Must do

- `hyphens: none;` — automatic hyphenation has no reliable Bangla dictionary.
- `overflow-wrap: normal;` — break only at real word boundaries.
- `line-height: 1.7` minimum for Bangla body text (1.8 is safer). Bangla stacks marks above and below the baseline; Latin's comfortable 1.5 crowds them.
- Set Bangla body text 1–2px larger than the Latin equivalent (Latin 16px → Bangla 17px). The মাত্রা and the ু / ্ marks are fine details that need the extra size. *This is a working allowance from practice, not a measured standard — unverified as a formal figure.*
- `text-align: left` for Bangla paragraphs. **Never justify** — Bangla words are long and break opportunities are fewer, so justification opens ugly rivers of white space.

Must not do

- `word-break: break-all` — this is the single worst thing you can do to Bangla. It splits inside conjuncts and produces broken clusters.
- `letter-spacing` on Bangla, even 0.01em. Tracking pulls the মাত্রা apart into dashes and detaches vowel marks from their letters. Set `letter-spacing: 0` explicitly for Bangla blocks so a global Latin tracking rule cannot leak in.
- `text-transform: uppercase` — Bangla has no letter case. It is a silent no-op on Bangla and will uppercase only the stray Latin words, creating an accidental mix.
- **Synthetic italic / oblique.** Bangla has no italic tradition and no true italic in Noto Sans Bengali; a slanted Bangla word looks like a rendering fault. For emphasis use **weight** or **colour** (Daybreak or Ember on Meridian) — never slant.
- **Manual** `<br>` **mid-phrase** to fake a line break. It survives into narrow screens and breaks the sentence in the wrong place.
- **Underline for emphasis.** The মাত্রা already gives every word a horizontal line; a second one below reads as noise, and descenders collide with it. Reserve underline for links, and push it clear with `text-underline-offset: 0.18em`.

- **Stray ZWJ / ZWNJ (U+200D / U+200C).** These invisible characters are only for deliberately forcing or forbidding a conjunct, which GRU953 copy never needs. They break search, `grep` and string comparison. Strip them from any text pasted in from elsewhere before it ships.
- **Zero-width space (U+200B)** to create a break point inside a word. Only ever at a true word boundary, and normally not at all.

Keep together with a non-breaking space (` ` /): 40 MB , 24px ,
GRU953-এর , 12 আপস্ট , and any number with its unit.

7. বাংলা পরিচিতি / Bangla bios

7.1 ছোট পরিচিতি — GitHub / LinkedIn (একটি লাইনের জন্য)

বাংলাদেশের একজন সলো ডেভেলপার। সহজ, সৎ সফটওয়্যার বানাই — বাংলা আর ইংরেজিতে, শুরু থেকেই। GRU953-এর নির্মাতা।

Even shorter, where the field is tight (GitHub's bio box, an avatar caption):

সলো ডেভেলপার, বাংলাদেশ। সহজ প্রযুক্তি, সবার জন্য। GRU953।

Note the আমি voice here — this is Aninda speaking as himself, which is correct for a personal profile. The product speaks as আমরা.

7.2 পরিচিতি — প্রায় 100 শব্দ / About, about 100 words

GRU953 বাংলাদেশের একজন সলো ডেভেলপারের স্টুডিও — অনিন্দ সুন্দর হাওলাদারের। এখানে যা তৈরি হয়, তার লক্ষ্য একটাই: প্রযুক্তি যেন সত্যিই সহজ হয়, আর সবার নাগালে থাকে — টাকা, ভাষা বা সামর্থ্য যেমনই হোক।

প্রতিটি অ্যাপ বাংলা আর ইংরেজিতে সমান যত্নে তৈরি; বাংলা কোনো অনুবাদ নয়, শুরু থেকেই নিজের ভাষা। যা ফ্রি, তা স্পষ্ট করে বলা হয়; যা সীমা, তা লুকোনো হয় না। কোনো ডার্ক প্যাটার্ন নেই, বাড়তি দাবি নেই।

লোগো আর নামটুকু বাদে বাকিটা খোলা — ডিজাইন সিস্টেম, কোড আর টেমপ্লেট যে কেউ নিতে পারেন, কাজেও লাগাতে পারেন। কাজ চলছে ধীরে, কিন্তু পুরো যত্ন নিয়ে। প্রশ্ন থাকলে জিজ্ঞেস করুন — উত্তর সোজা ভাষায় পাবেন।

Word count: exactly 100 Bangla words. (Counted as whitespace-separated tokens, excluding the four dashes; দাঁড়ি and commas attach to the preceding word, as Bangla is normally counted.)

⚠ **Aninda — one thing I could not verify.** The Bangla spelling of your name. The Latin spelling "Aninda" maps to **অনিন্দ**; "Anindya" would be **অনিন্দ্য**. I have used **অনিন্দ সুন্দর হাওলাদার**. Please confirm or correct it — a person's own name is the one place a brand guide must not guess. Marked **unverified** until you say.

8. প্রকাশের আগে শেষ পরীক্ষা / Pre-publish checklist for any Bangla text

Nine checks. If any answer is no, it is not ready.

1. চলিত ভাষা, কোথাও সাধু ঢুকে পড়েনি?
2. সব জায়গায় আপনি — একবারও তুমি নেই?
3. প্রতিটি বাক্য দাঁড়ি (।) দিয়ে শেষ, কোথাও Latin full stop নেই?
4. সব সংখ্যা Latin (0–9), GRU953 অটুট?
5. GRU953 Latin বড় হাতের, suffix হাইফেন দিয়ে জোড়া?
6. কোনো বানানো বাংলা শব্দ নেই — সব শব্দ ঢাকার একজন ডেভেলপার মুখে বলবেন?
7. একই শব্দের বানান পুরো লেখায় এক (ডেটা, রিপোজিটরি, অ্যাকাউন্ট)?
8. কোনো অতিরঞ্জন নেই, কোনো তারিখহীন প্রতিশ্রুতি নেই, প্রতিটি দাবির পাশে সংখ্যা আছে?
9. পড়ে মনে হচ্ছে বাংলায় লেখা — ইংরেজি থেকে অনুবাদ করা নয়?

Test 9 is the one that matters. Read it aloud. If your mouth trips, an English sentence is hiding underneath.

এই ফাইলটি `BRAND-SPEC.md` -এর অধীন। এখানকার কোনো কিছু ওই সিদ্ধান্তগুলোর সঙ্গে না মিললে `BRAND-SPEC.md` চলবে। *This file is subordinate to `BRAND-SPEC.md`. Where they disagree, BRAND-SPEC wins.*

The logo

লোগো

The Soaring Bird is Aninda's own drawing, and what ships is that drawing — the master path, unmodified. Nothing is re-traced, thickened or simplified.

There is one bird

There were once three size-graded builds. They were three separate constructions, they drifted apart, and the smallest one ended up with its wing severed from its body. **One drawing cannot drift from itself**, so one drawing is what ships.

Below 24px a line drawing stops working — the strokes thin out and the wing's counters begin to close. The honest answer is not a thinner bird but a different object: **the tile**, where a block of colour carries recognition. That 24px floor is checked mechanically on every build; if the counters close, the file is not written.

The mark

24px and above

The bird alone. Set the colour with CSS — it is drawn with `currentColor`.

The tile

below 24px, and any filled icon

The same bird in Daybreak on Meridian, at the squircle radius — a rounded square, rounder than a normal button corner — which iOS and Android expect. Favicon, app icon, avatar.

The lockups

Every lockup embeds the same bird path and the same outlined wordmark, so nothing in the set can drift out of step. All text is converted to outlines — including the Bangla, which is properly shaped rather than assembled letter by letter.

GRU953

Horizontal

The default. Use wherever there is width — README headers, site headers, letterheads.

GRU953

সহজ প্রযুক্তি। সবার জন্য।

Simple technology. For everyone.

Horizontal with the tagline

Use where there is room to say what GRU953 is. This is the form that answers the “GRU” reading risk before it can start.

GRU953

Stacked

For square and narrow spaces: a social avatar area, a poster, a business card.

GRU953

সহজ প্রযুক্তি। সবার জন্য।

Simple technology. For everyone.

Stacked with the tagline

Posters, covers, title cards — anywhere the brand introduces itself.

GRU953

Wordmark alone

When the mark is already present nearby, or the space is too small for both.

সহজ প্রযুক্তি। সবার জন্য।

Simple technology. For everyone.

The tagline alone

Both languages, as artwork. Use as a footer or a sign-off.

Clear space and minimum size

Clear space is **half the mark's own height on every side**. Nothing enters it — no text, no rule, no border, no second logo, no photograph edge. The diagram shows the rule at 120px.

$\frac{1}{2} h$ the mark, height h $\frac{1}{2} h$

ASSET	NEVER SMALLER THAN	IN PRINT
Horizontal lockup	120px	25mm wide
Lockup with the tagline	260px	55mm wide
The bird alone	24px	6mm
The tile	16px	—
Anything below 16px	Use no mark at all. A logo nobody can resolve is worse than no logo.	

Approved colour combinations

Daybreak on paper • 4.71:1

Ink on paper – single colour • 19.32:1

#FFAB8E on paper • 1.83:1 • not approved – use #B45A39 instead

The mark does not move

No animation, no transition, no hover state on the bird itself. A mark that moves can be caught mid-movement looking broken — in a screenshot, in a thumbnail, on a slow connection. Everything else in this book may animate; the bird does not.

Colour

৯৭

Three colours carry the brand, two more carry meaning, and the signature is **one hue with two tuned values** so it is correct in a light theme and a dark one. Every number on this page was computed by `04_colour/engine.py`, not chosen by eye and hoped for.

Why the signature has two values

Luminance is how much light a colour actually emits — not how colourful it looks, just how bright. Contrast is a ratio between two luminances, so it is a measure of brightness difference and nothing else.

To clear 4.5:1 against white a colour must be *darker* than luminance 0.1833; to clear 4.5:1 against the Ink it must be *lighter* than 0.1946. Both cannot be true, so **no single colour can be this brand's text colour in both themes** — that is arithmetic, not taste. Every figure on this page comes from `tokens.json`, computed at build time; none of them is typed by hand.

Daybreak is therefore two values from one ramp. Use `--gru-accent` and let the theme choose.

Said precisely: one hue, two calibrated values — not one colour. The two sit 0.51° apart in hue, which is the same colour family, but ΔE 24.6 apart in appearance, which is obviously different. Side by side a reader will call them two colours; switching from the light theme to the dark one, the same reader will say the brand kept its colour. Both are true, and the second is the one an identity lives or dies by. This book publishes the number rather than claiming the friendlier version.

LIGHT THEME

#B45A39

4.71:1 on paper

DARK THEME

#FFAB8E

10.55:1 on ink

The signature

Meridian

মেরিডিয়ান

#1A1753

The deep sky before dawn. The ground, the wordmark on paper, and the colour of information.

step 900 · hue 278.0°

Daybreak

ভোরের আলো

#FFAB8E

First light. THE SIGNATURE — one hue, two tuned values: a deep step on light grounds, this pale step on dark ones.

step 300 · hue 39.8°

Ember

অঙ্গার

#EDB24D

Warm mid-tone. Gradient midpoint, secondary emphasis, and the colour of a warning.

step 300 · hue 78.0°

Ink

#0B0E14

The dark ground, and body text on paper.

Paper

কাগজ

#FFFFFF

The light ground. Plain white, deliberately.

The signature gradient — “first light”

Hero artwork only. Never behind body text, never on the mark itself.

The full ramps

Eleven steps each, monotonic in perceived lightness, with the brand colour sitting inside its own ramp rather than bolted on beside it. Hover or focus a swatch to read its value.

Which step to use for text

Chosen by measurement, not by feel. Each is the most colourful step that still clears its WCAG 2.2 target with a safety margin, so rounding to hex can never quietly drop it below.

Every role, in both themes

These are the tokens to reach for in an interface. Each one is defined in both themes and each was measured against its own theme's background — a role is only correct in the theme it belongs to.

Left swatch is the light theme, right swatch the dark one. Full values in `assets/tokens.css` and `assets/tokens.json`.

The chart sequence

Six series, spread around the colour wheel and anchored on the brand's own two. Every one clears 3:1 against its own theme's background, and no two are within ΔE 10 of each other — so they cannot be confused, and colour is never the only thing telling them apart.

The measured proof

Every number on this page is **computed** by `04_colour/engine.py`. None of it is asserted by hand. Regenerate the page whenever a colour changes.

The four words this page needs, in plain English.

- **WCAG** — the Web Content Accessibility Guidelines, the accessibility rulebook that regulators and procurement teams actually point to. Version 2.2, level AA, is the bar used throughout. AAA is the stricter level above it.
- **Luminance** — how much light a colour emits. Brightness, not colourfulness.
- **Contrast ratio** — the ratio between two luminances, written `4.5:1`. Bigger is easier to read.
- **ΔE** , said *delta E* — how different two colours *look* to a normal eye. Under about 1, nobody notices. Over about 10, anyone would call them different colours. The method here is CIEDE2000, the current standard for this.

Standard: WCAG 2.2. Normal text needs **4.5:1** for AA and **7:1** for AAA. Large text (24px, or 19px bold) and non-text interface parts need **3:1**. Every role below clears its target by at least **0.05**, so rounding to 8-bit hex cannot quietly drop it under.

▼ Open the full computed contrast tables

1. Why the signature is one hue with two values

This is the single most important fact about the palette, so it is proved first.

WCAG contrast is $(L1+0.05)/(L2+0.05)$ on relative luminance.

To reach 4.5:1 against white a colour needs luminance ≤ 0.1833 .

To reach 4.5:1 against the ink #0B0E14 it needs luminance ≥ 0.1946 .

Those two cannot both be true. **No single colour can be this brand's text colour in both themes.** So Daybreak is expressed as two tuned values from one ramp:

THEME	TOKEN RESOLVES TO	GROUND	RATIO
light	#B45A39	#FFFFFF	4.71:1
dark	#FFAB8E	#0B0E14	10.55:1

They are the SAME HUE — 0.51° apart, which is inside the range a viewer reads as one colour family. They are **not** the same value, and this page will not pretend otherwise: their CIEDE2000 difference is **ΔE 24.6**, well above the ΔE 10.0 floor this page uses elsewhere for *obviously different*. One is a deep terracotta and one is a pale salmon, because that is what being legible on white and being legible on near-black actually require.

The honest statement is therefore: **one hue, two calibrated values** — not *one colour*. Someone shown the two side by side will say they are different. Someone shown the light theme and then the dark theme will say the brand kept its colour. Both are true, and the second is the one that matters for an identity.

2. The pairings you will actually use

PAIRING	FOREGROUND	BACKGROUND	RATIO	NORMAL TEXT	LARGE TEXT / UI
Signature on paper (light theme)	#B45A39	#FFFFFF	4.71:1	AA	AAA
Signature on ink (dark theme)	#FFAB8E	#0B0E14	10.55:1	AAA	AAA
Meridian on paper	#1A1753	#FFFFFF	16.26:1	AAA	AAA
White on Meridian	#FFFFFF	#1A1753	16.26:1	AAA	AAA
Daybreak on Meridian	#FFAB8E	#1A1753	8.88:1	AAA	AAA
Ember on Meridian	#EDB24D	#1A1753	8.58:1	AAA	AAA
Ink on Daybreak	#0B0E14	#FFAB8E	10.55:1	AAA	AAA
Ink on Ember	#0B0E14	#EDB24D	10.19:1	AAA	AAA
Ink on paper	#0B0E14	#FFFFFF	19.32:1	AAA	AAA
Paper on ink	#FFFFFF	#0B0E14	19.32:1	AAA	AAA

3. Every semantic role, measured against its own theme's background

A role is only correct if it is correct **in the theme it belongs to**. Each row is measured against that theme's `bg`.

ROLE	LIGHT VALUE	ON PAPER	DARK VALUE	ON INK

4. Distinctiveness — no two meanings may look alike

Contrast says a colour is legible. It says nothing about whether *success* can be told apart from *warning*. These are CIEDE2000 differences; the floor here is **ΔE 10.0**, an obvious difference to a normally-sighted viewer.

SET	CLOSEST PAIR	ΔE	VERDICT
light theme meanings	danger vs accent	10.8	PASS
dark theme meanings	danger vs accent	19.2	PASS
light chart series	Meridian vs Orchid	19.3	PASS
dark chart series	Meridian vs Orchid	18.6	PASS

4a. Distinctiveness against colours other brands already own

The check above asks whether the kit's own colours can be told apart. This one asks the question that actually matters to a developer audience: **does the brand look like somebody else's?** These are CIEDE2000 differences against colours that audience sees every day.

GRU953 COLOUR	VALUE	CLOSEST THREE
Meridian	#1A1753	Slack aubergine ΔE 12.5, Heroku ΔE 13.1, Notion ΔE 22.6
Daybreak · light	#B45A39	sienna (the pigment) ΔE 5.4, Rust ΔE 7.2, Anthropic ΔE 11.3
Daybreak · dark	#FFAB8E	Anthropic ΔE 13.8, terracotta (the pigment) ΔE 14.3, Figma ΔE 20.8
Ember	#EDB24D	Tailwind amber ΔE 6.4, Mailchimp ΔE 15.8, Anthropic ΔE 25.0

Read honestly: Daybreak's light value sits closest to Rust's brand orange and to the sienna pigment. That is a real proximity and it is published rather than left out. It was accepted for three reasons. The proximity is to a *deep interface accent*, not to the brand's dominant colour — brands collide through their marks and their grounds, which here are a bird and a deep indigo, neither of which resembles Rust. The chroma at the deep end is deliberately tapered (see the `taper` in the engine) precisely to pull away from the saturated rust-orange region. And the value a viewer sees most often is the pale one, on dark grounds, which is ΔE 13.8 from its nearest neighbour.

Meridian is in a crowded region and the kit says so. Deep indigo is owned by many brands, which is exactly why it is treated as the *ground* rather than the signature. The signature is Daybreak, the bird, and the pairing — not the navy.

The chart sequence

#	SERIES	LIGHT THEME	ON PAPER	DARK THEME	ON INK
1	Meridian	#858DD4	3.11:1	#6971B3	4.24:1
2	Daybreak	#D67554	3.21:1	#B55939	4.1:1
3	Kingfisher	#008995	4.19:1	#006B77	3.1:1
4	Verdant	#2D8C50	4.22:1	#136E39	3.05:1
5	Orchid	#C075B9	3.24:1	#A0599B	4.04:1
6	Ember	#C08811	3.1:1	#A16B00	4.25:1

5. Full ramps, every step measured against both grounds

Monotonic means every step is reliably lighter than the one below it — the ramp never doubles back. A ramp that wanders is unusable for an interface, because you can no longer reach for "one step darker" and know what you will get.

Meridian — `--gru-meridian*` (anchor `#1A1753` at step 900)

800	#7D0512	11.04:1	1.75:1	✓
900	#530002	15.34:1	1.26:1	✓
950	#330000	18.41:1	1.05:1	✓

6. Result

PASS. Every ramp is monotonic. Every brand anchor sits inside its own ramp. Every semantic role clears its WCAG 2.2 target in its own theme, with margin. No two meaning-bearing colours are confusable.

7. What this page deliberately does not claim

These are WCAG 2.x ratios. APCA (a candidate method in the draft WCAG 3) is not used, because WCAG 2.2 AA is the standard actually named in law and in procurement today.

A passing ratio does not by itself make a screen readable. Text size, weight, line length and sheer quantity all matter, and none of them are measured here.

ΔE distinctiveness is computed for normal colour vision. It is not a colour-blindness simulation. In this kit colour is never the only carrier of meaning — every state also carries a word, an icon or a shape, which is the actual protection.

Nothing here has been tested with a real screen reader by a real user.

Typography

টাইপোগ্রাফি

Four faces, each with exactly one job. All five files are SIL Open Font Licence 1.1, free for any purpose including commercial, and their licences travel with them in `assets/fonts/`.

ROLE	FACE	WHY THIS ONE
Display, wordmark, headings	Sora	Its numerals decide it. GRU953 contains three digits, and Sora’s 9, 5 and 3 have flat geometric terminals that read like instrument dials.
Body, Latin	Noto Sans	Carried forward. Nothing breaks and nothing is relicensed.
All Bangla	Noto Sans Bengali	Carried forward, and genuinely excellent.
Code, labels, metadata	JetBrains Mono	Replaces the generic system-monospace stack, so a hash, a hex value or a file path looks the same on every machine.
Large Bangla display OPTIONAL	Anek Bangla	For a big Bangla headline where Noto Sans Bengali Bold reads a little even.

Why Sora, in one picture

The same six characters in the five faces that made the shortlist, each set in its own real typeface — the four rejected ones are embedded in this page, subset to these characters, so this is evidence rather than an assertion. Watch the digits.

GRU953

Sora – chosen

GRU953

Space Grotesk

GRU953

Chivo

GRU953

Bricolage Grotesque

GRU953

Geist

Rejected, and why, so it is on the record: **Geist** is excellent but it is Vercel's brand face, so it borrows someone else's association. **Space Grotesk** is strong but its 5 and 3 read as fashionable. **Chivo** is too editorial. **Bricolage Grotesque** is too busy at display weight.

The scale

A modular scale on a ratio of 1.25, anchored at 16px, clamped so it shrinks on a phone without needing a media query. Every size is in `rem`, so a reader who enlarges their default text is obeyed.

Caption

Bangla is not Latin with different letters

Two things must change, and both are easy to get wrong.

DO

Leading of 1.85. Bangla stacks marks above and below the মাত্রা, the headline running across the top of most letters. At Latin's 1.6 those marks nearly touch the line below.

সহজ প্রযুক্তি, সবার জন্য। কোনো টুল যেন মানুষকে বিশেষজ্ঞ হতে বাধ্য না করে।

DON'T

Never all-caps, never letter-spacing, never a faux bold. Bangla has no capital letters, so `text-transform` does nothing useful, and both letter-spacing and synthetic bolding break conjunct characters.

সহজ প্রযুক্তি, সবার জন্য।

That example is deliberately wrong, so the damage is visible.

The wordmark as live text

The logo is always the SVG file. But when the word appears as text — an HTML title, an email signature, a heading — set it with `.gru-wordmark` : Sora 700, the wordmark's own tracking, tabular figures so 953 stays even-width, and `white-space:nowrap` so GRU953 never breaks across a line.

GRU953

Design rules

ডিজাইন নিয়ম

GRU953 — design rules

The parts of the system that are not colour, type or the logo file itself: how the mark is placed, how a page is laid out, how icons and pictures behave, how things move, and what accessibility actually requires rather than what it is usually reduced to.

0. When the thing you need is not in the system

This is the first section because it is the question that actually comes up, and a system with no answer to it gets abandoned the first time it is inconvenient.

You need a colour the palette does not have. Work down this list and stop at the first answer that works.

1. **Use a role token instead of a new colour.** Nine times out of ten the need is "a warning" or "a muted surface", and there is already a token for it.
2. **Group the data.** If a chart needs a seventh series, the honest fix is usually fewer series: group the tail into "other", or split it into two charts. Seven colours is the point at which a reader stops distinguishing them anyway.
3. **Use a different step of a colour already in the palette.** Every family has eleven, and `CONTRAST.md` records what each one clears.
4. **Only then add a hue** — and add it properly, in `04_colour/engine.py`, as a family with a stated meaning. Then re-run the engine, which will refuse to write anything if the new hue is illegible or too close to an existing one. Never paste a hex code into a stylesheet to get past an afternoon; that is how a palette becomes a paint shop.

You need a size, weight or spacing the scale does not have. Round to the nearest step on the scale. If the layout genuinely breaks, the layout is the problem, not the scale.

You need to break a rule in this document. Write down which rule and why, in the same place as the work. A rule broken with a reason is a decision; a rule broken quietly is drift.

1. Using the logo

1.1 Which file, at which size

There is one bird. Choosing is mechanical:

IF THE MARK WILL BE SHOWN AT	USE	FILE
24px and above	The mark itself	GRU953-bird.svg
Below 24px	The tile , not a shrunken bird	GRU953-appicon.svg

Below 24px the bird's strokes thin out and the wing's *counters* begin to close — counters being the small enclosed gaps inside a shape, like the hole in an *o*. They are always the first thing to blur shut as a drawing gets smaller. The tile solves that honestly: a block of colour is recognisable at a size where a line drawing is not. Shrinking the bare mark to 16px and hoping is the single most common way to make this identity look amateur.

This floor is checked mechanically. `03_logo/marks.py` rasterises the mark at 24px on every build and refuses to write the file if the counters have closed.

1.2 Minimum sizes

- Horizontal lockup: **120px** on screen, **25mm** in print. Below that the wordmark's digits start to close up.
- Lockup with the tagline: **260px** on screen, **55mm** in print.
- The bird alone: **24px** on screen, **6mm** in print.
- The tile: **16px**.

These are floors, not targets. If a layout can only give the logo 90px, use the mark alone rather than shrinking the lockup.

1.3 Clear space

One half of the mark's own height, on all four sides. So a 64px bird needs 32px of empty space around it. Nothing enters that space: no text, no rule, no border, no second logo, no photograph edge, no button.

The `.gru-logo-safe` class in `layout.css` enforces this, so it does not have to be remembered every time.

1.4 Colour combinations that are approved

GROUND	MARK COLOUR	RATIO	NOTES
Meridian #1A1753	Daybreak #FFAB8E	8.88:1	The primary pairing.
Meridian	Paper #FFFFFF	16.26:1	For maximum formality — a CV, an invoice, a legal page.
Ink #0B0E14	Daybreak #FFAB8E	10.55:1	Dark theme.
Paper #FFFFFF	Meridian	16.26:1	The default on light.
Paper	Daybreak #B45A39	4.71:1	When the mark must be warm on white.
Paper	Ink	19.32:1	Single-colour printing, stamps, engraving.
A photograph	Ink or Paper only	—	See 1.5.

Nothing else. **Daybreak #FFAB8E on paper is not approved:** at 1.83:1 the bird disappears. That pairing is exactly why the signature has two values — on a light ground the correct Daybreak is #B45A39.

1.5 On a photograph

The mark goes on a photograph only in white or in Ink, and only over a part of the image that is genuinely plain. If the area is busy, put a solid Meridian panel behind the mark rather than trying to make it work — a panel is honest, a barely-visible logo is not.

1.6 The things never to do

1. **Do not stretch, squash, rotate or skew it.** The bird is already in flight; tilting it does not make it fly harder.
2. **Do not recolour it** outside the approved builds. No gradients on the mark itself — the gradient belongs to the background, never to the bird.
3. **Do not add effects.** No drop shadow, no outer glow, no bevel, no outline, no stroke.
4. **Do not re-typeset the wordmark.** It ships as outlines precisely so it cannot drift. If the wordmark is set as live text in Sora it is *text*, not the logo.

5. **Do not place it inside a shape** it was not given — no circles, no badges, no "roundel" versions. The app-icon tile is the one approved container.
6. **Do not combine it with another logo** in a way that reads as a joint venture.
7. **Do not use it as a decorative pattern**, a bullet point, or a texture.
8. **Do not animate the bird flapping**. See section 4.

1.7 What the bird means, for anyone who asks

A bird climbing rather than a bird arrived. The faceted wing is deliberate: it is a constructed thing, drawn from parts, like software. That is the whole idea — something made carefully, going somewhere. The mark is not a metaphor for freedom or for speed, and the guidebook does not claim it is.

2. Layout

2.1 The grid

12 columns on a desktop, 6 on a tablet, 4 on a phone, with a 24px gutter. Content is capped at **1216px**; a page that is mostly prose is capped at **736px** instead, because a line of text longer than about 68 characters is measurably harder to read.

2.2 The spacing scale

A 4px base: 4, 8, 12, 16, 24, 32, 48, 64, 96, 128. Every gap in the system is one of those numbers. **When unsure, use 16px**. Two things that belong together get a smaller gap than the gap to whatever is next — that single rule does most of the work of making a layout look organised.

2.3 Shape

Four radii: 4px for badges and inline code, 8px for buttons and inputs, 14px for cards and images, 24px for hero panels. The app icon uses 22.46% because that is the *squircle* — a rounded square, rounder than a normal button corner — that Apple and Google both expect. Do not reuse that number anywhere else.

2.4 Depth

Three shadow levels, all tinted with Meridian rather than black — a grey shadow on a coloured brand always looks slightly dirty. **In dark mode shadows do not work at all**, so depth is carried by a lighter surface plus a 1px border instead. Do not simply darken the shadow and hope.

2.5 The composition habit that carries the brand

Most of the identity's character comes from one habit: **a deep Meridian field with a great deal of empty space, one point of Daybreak, and everything aligned to a single strong edge**. Restraint is doing the work, not decoration. If a layout feels flat, the answer is more space and better alignment, not more colour.

3. Icons and pictures

3.1 Icons

Use **Material Symbols** (Apache 2.0, so free for any purpose), in the **Rounded** style, at **weight 300**, optical size matched to the text beside it. Part of the system — it was the right choice and there is no reason to churn it.

Rules:

- **1.5px stroke** at 24px, scaling proportionally. Never mix stroke weights in one view.
- Icons inherit the text colour they sit beside. An icon is not an opportunity for colour.
- **An icon never carries meaning alone.** Every icon that means something has a text label, or an `aria-label` if it genuinely cannot. This is not optional politeness; a screen reader announces nothing at all for a bare icon.
- Do not draw custom icons unless Material Symbols has no equivalent. A single inconsistent custom icon is more noticeable than a slightly imperfect standard one.

3.2 Pictures

The honest position: GRU953 is one person, and **stock photography of smiling strangers in an office would be a lie**. So the picture policy is:

1. **First choice — no picture.** Type, space and one colour, done well, beat a decorative image every time.
2. **Second choice — the real thing.** A screenshot of the actual software, a photograph of the actual desk, the actual person. Real and slightly imperfect is better than polished and generic.
3. **Third choice — generated abstract art** built from the brand's own geometry: the first-light gradient, the wing's facet angles, the grid. This is the only approved decorative imagery.
4. **Never** stock photos of people, handshakes, glowing brains, circuit-board overlays, or anything that implies a team or an office that does not exist.

Screenshots get a 14px radius, a 1px border, and shadow level 2. Nothing else.

3.3 Diagrams

Diagrams use the neutral ramp for structure and Daybreak for the one thing the reader should look at first. If a diagram needs more than three colours it is showing more than one idea and should be two diagrams.

4. Motion

4.1 Two durations, two curves

- **120ms** for a colour, a hover, a focus ring.
- **220ms** for something arriving or leaving.
- Anything above **300ms** on an interface element reads as broken, not elegant.
- Ease-out for things arriving, ease-in-out for things moving in place.

4.2 What may move, and what may not

May move: a panel sliding in, a list reordering, a loading indicator, a focus ring, a number counting to its value once.

May not move: the logo. The Soaring Bird does not flap, fly across the screen, draw itself in, or pulse. A logo that performs is asking for attention rather than earning it, and it dates within a year. The single permitted exception is a fade-in on first page load, at 220ms, once.

4.3 Reduced motion is not a nice-to-have

Every transition in this system is switched off by `prefers-reduced-motion: reduce`, which is already wired into `typography.css`. For some people motion causes genuine nausea and vertigo. Honouring that setting costs four lines of CSS. A brand whose second pillar is "for everyone" does not get to skip it.

5. Accessibility

This is the chapter most brand guides reduce to a contrast table. Contrast is the easy part. These are the commitments that actually matter.

5.1 The floors, which are not negotiable

REQUIREMENT	THE RULE	WHERE IT IS PROVED
Text contrast	4.5:1 normal, 3:1 large (24px, or 19px bold)	<code>04_colour/CONTRAST.md</code> — every ratio computed
Non-text contrast	3:1 for UI parts, focus rings, meaningful graphics	same file
Focus visible	A 3px ring at 2px offset, on every interactive thing	<code>typography.css</code> , <code>:focus-visible</code>
Keyboard	Everything reachable and operable without a mouse	must be tested, not assumed
Text size	Body text never below 16px; all sizes in <code>rem</code>	<code>typography.css</code>
Reduced motion	Honoured	<code>typography.css</code>
Target size	24×24px minimum for anything tappable, 44×44px preferred	—

5.2 Colour is never the only signal

Every state carries a second cue. An error is red **and** says "Error" **and** has an icon. A required field is marked with a word, not a colour. A chart series is distinguished by a shape or a direct label, not by hue alone. Roughly one man in twelve has some form of colour-vision deficiency; this rule is the difference between a design that works for them and one that does not.

5.3 Language must be declared

Every page sets `lang`, and every Bangla passage inside an English page sets `lang="bn"`. Without it a screen reader attempts to pronounce Bangla with English rules, and the result is unintelligible. For a bilingual brand this is the single highest-value accessibility line of code there is.

5.4 Alternative text, written properly

Every image gets alt text that says what it *means*, not what it *is*. The logo's alt text is `GRU953`, not "logo". Decorative art gets `alt=""` so it is skipped rather than

narrated. The logo SVGs already carry `<title>` and `<desc>`, so an inline SVG is announced correctly without extra work.

5.5 What this kit does not claim

- Passing a contrast ratio does not make a screen readable. Size, weight, line length and the sheer amount of text all matter and none of them is measured by a ratio.
- **Nothing here has been tested with a real screen reader by a real user.** That is a genuine gap, stated plainly rather than papered over.
- APCA, the candidate contrast method in the draft WCAG 3, is not used. WCAG 2.2 AA is the standard actually cited in law and procurement today.
- Distinctiveness is computed for normal colour vision. It is not a colour-blindness simulation. Colour is never the only carrier of meaning here — every state also carries a word, an icon or a shape — and that, not the ΔE figure, is the actual protection.

Applications

প্রয়োগ

This chapter is the practical half of the book: what to actually do on each surface, in the order those surfaces matter.

1. GitHub — the most-seen surface

More people will judge GRU953 from a GitHub page than from anything else. Three things do almost all the work.

1.1 The profile README

Your profile README is the front door. The written version is in

`07_templates/github-profile-README.md`, ready to commit to a repository named `GRU-953`.

The structure that works:

1. The header banner (light and dark, switched by the reader's theme).
2. One sentence saying what GRU953 is — **immediately**, because of the “GRU” reading risk.
3. The tagline, in both languages.
4. What you are building now. Two or three things, with links.
5. How to reach you.
6. A licence line.

Nothing else. No badge wall, no visitor counter, no trophy case, no animated typing banner. Those read as decoration to a recruiter and as noise to a developer.

1.2 The theme-switching banner

GitHub honours `prefers-color-scheme` in markdown through a `<picture>` element. This is the only reliable way to make a banner look right in both themes:

```
<picture>
  <source media="(prefers-color-scheme: dark)"
    srcset="assets/readme-header-dark.png">
  
</picture>
```

Note the `alt` text says what the banner *means*, not “banner image”.

1.3 The social preview

Every repository has a **Settings** → **Social preview** field. It is the image that appears when anyone shares the link — in Slack, on X, in a LinkedIn post. GitHub specifies **1280×640**, and `06_assets/outreach/github-social-preview.png` is exactly that size.

Most repositories leave this empty and get a grey default. Setting it takes twenty seconds per repository and is the highest-return brand action available on GitHub.

1.4 Repository conventions

THING	THE GRU953 WAY
Repository name	lowercase, hyphenated: <code>gru953-ledger</code> , not <code>GRU953_Ledger</code>
README first line	what it does, in one plain sentence — never a logo with no explanation
A “what this does not do” section	Required. This is <i>Honest craft</i> made concrete, and it prevents the most common kind of disappointed issue.
Licence	Apache-2.0 for code, Apache-2.0 for content, marks reserved. See Licence and governance .
Badges	At most three, and only ones that are true and current: licence, build, version.
<code>lang</code> on any HTML	Always set. Always mark Bangla passages <code>lang="bn"</code> .

2. The portfolio site

2.1 Wiring the tokens in

Three stylesheets, in this order. They are plain CSS custom properties — no build step, no framework, no dependency.

```
<link rel="stylesheet" href="assets/tokens.css">
<link rel="stylesheet" href="assets/typography.css">
<link rel="stylesheet" href="assets/layout.css">
```

Then use the semantic role tokens rather than the raw colours, so light and dark modes come for free:

```
.card {
  background: var(--gru-surface);
  color: var(--gru-ink);
  border: 1px solid var(--gru-border);
  border-radius: var(--gru-radius-md);
  padding: var(--gru-space-5);
  box-shadow: var(--gru-shadow-1);
}
.card a { color: var(--gru-link); }
```

Use `--gru-brand`, **not** `--gru-meridian-900`. The role tokens change with the theme; the raw ramp tokens do not. Reaching past the role into the ramp is how a dark mode ends up with navy text on a navy background.

2.2 The head of every page

```
<html lang="en">
<link rel="icon" href="favicon.ico" sizes="32x32">
<link rel="icon" href="icon.svg" type="image/svg+xml">
<link rel="apple-touch-icon" href="apple-touch-icon.png">
<meta name="theme-color" content="#1A1753">
<meta property="og:image" content="og-card-1200x630.png">
```

All five files are in `06_assets/favicon/` and `06_assets/outreach/`.

Plain HTML site: put those files next to your `index.html` and the paths above work as written.

Framework or bundler (Next.js, Astro, Vite, a single-page app): put the same files in whatever folder the tool serves untouched — usually `public/`, sometimes `static/` — and put the same five tags in the file that controls the page `<head>`. In Next.js's App Router that is `app/layout.tsx`; in Astro it is your layout component; in a plain Vite app it is `index.html`. The tags do not change; only where you write them does.

2.2a Setting type from the scale

Colour has a worked example above; type deserves the same one. The scale is a set of tokens, so use the token and never a raw pixel value:

```
h1 { font-family: var(--gru-font-display); font-size: var(--gru-text-3xl);
      line-height: 1.05; letter-spacing: -.022em }
```

```
h2 { font-family: var(--gru-font-display); font-size: var(--gru-text-2xl); line-height: 1.15
h3 { font-family: var(--gru-font-display); font-size: var(--gru-text-xl) }
p, li { font-family: var(--gru-font-text); font-size: var(--gru-text-base); line-height: 1.6
code, .mono { font-family: var(--gru-font-mono); font-size: .88em }
:lang(bn) { line-height: 1.85 } /* Bangla needs the extra room for its matra */
```

Every one of those sizes is fluid — it grows with the window, so there are no breakpoints to maintain. The only line you may need to change is the Bangla leading, and only upwards.

2.3 The page shape that carries the brand

A deep Meridian hero with a great deal of empty space, one Daybreak element, and everything aligned to one strong left edge. Then plain white below it for the reading. Restraint is doing the work — if a page feels flat, add space and fix the alignment before adding colour.

3. Documents

DOCUMENT	LOGO	NOTES
CV	Horizontal lockup, Meridian on white, top-left, 140px	Content in <code>07_templates/CV-content.md</code> . Photograph conventions differ by market: a photo is normal on a CV in Bangladesh and much of South Asia, and is best left off for a UK or US employer. Match the market you are applying to.
Letterhead	Horizontal lockup top-left, 120px, 25mm clear space	Ink for body text, Meridian for headings.
Invoice · proposal	Wordmark only, or lockup at 120px	Wording in <code>07_templates/invoice-and-proposal-copy.md</code> .
Slide deck	Stacked lockup on the title slide; the tile bottom-right elsewhere at 24px	Title slides Meridian; content slides white. Never put body text on the gradient.
Email signature	No image — a text wordmark	Images in signatures get blocked or stripped. Three versions in <code>07_templates/email-signature.md</code> .

For print, use the single-colour Ink build unless colour is definitely available, and check that the lockup is at least **25mm** wide.

4. Social and posts

- **Avatar:** `avatar-512.png` — the bird on Meridian. Most platforms crop it to a circle, so the mark is kept well inside a safe circle.
- **X header:** `x-header-1500x500.png` . X crops the edges on small screens; nothing important sits within 90px of an edge.
- **LinkedIn banner:** `linkedin-banner-1584x396.png` . LinkedIn puts your profile photo over the lower left, so that area is deliberately empty.
- **Post images:** use the `og-card` proportions (1200×630) — it renders well on Facebook, LinkedIn, Slack and X alike.

Post copy is in `07_templates/social-copy.md` , in both languages. The voice rules apply as much to a 200-character post as to a document: no hype, no hashtag spam, no manufactured urgency.

5. The apps themselves

- App icon: `GRU953-appicon.svg` and the PNG set in `06_assets/png/` . The 22.46% squircle radius is what iOS and Android expect.
- Splash: Meridian ground, the bird centred, nothing else. No spinner unless something is genuinely loading.
- Interface colour: use the **role** tokens — `--gru-bg` , `--gru-ink` , `--gru-accent` and the rest. They are defined in both themes, so a screen built from them is correct in light and dark without a second stylesheet. For status use `--gru-info` , `--gru-success` , `--gru-warning` and `--gru-danger` ; for charts use `--gru-chart-1` to `--gru-chart-6` . Never reach past the roles to a raw ramp step in interface code.
- In-app text: bilingual, plain, and never blames the user. An error says what happened and what to do next.

6. The five-minute check before anything ships

1. Is the logo the right **build** for its size, and is its **clear space** clear?
2. Does every colour pairing pass its contrast target? (`04_colour/CONTRAST.md` has the numbers.)
3. Is `lang` set (the HTML attribute that tells a screen reader which language it is reading), and is every Bangla passage marked `lang="bn"` ?
4. Does every image have alt text that says what it **means**?
5. Can you reach and operate everything with the keyboard alone, and see where the focus is?

6. Is anything claimed that has not been checked? If so, either check it or say it is unverified.
7. Is there anything here that has not earned its place? Remove it.

Licence and governance

লাইসেন্স ও পরিচালনা

Four parts, four answers. **The system is open** under Apache-2.0 — use the colours, tokens and CSS for anything, including making money. **The book is source-available** under PolyForm Noncommercial 1.0.0 — read it, copy it, adapt it, share it, but do not sell it. **The marks are not licensed at all.** **The typefaces** keep their own SIL Open Font Licence.

WHAT	LICENCE	SPDX	OSI - APPROVED?	COMMERCIAL USE?
The system — colour tokens, stylesheets, every script in the kit	Apache License 2.0	Apach e-2.0	Yes	Yes. Keep the copyright notice and the NOTICE file, and say if you changed a file.
The book and the writing — this guidebook, the chapters, the templates, the documentation	PolyForm Noncommercial 1.0.0	PoLyF orm- Noncom mercia l- 1.0.0	No — source-available, not open source	Not without asking. Everything noncommercial is already permitted.
The marks — the name, the Soaring Bird, the tile, the wordmark, any lockup	Not licensed	—	n/a	No. You may show the unmodified mark to refer to GRU953. Nothing more.
The bundled typefaces	SIL Open Font Licence 1.1	OFL- 1.1	Yes	Yes. Their licences travel with the files.
Colour values	Not restrictable	—	n/a	Yes. A hexadecimal number is not property.

Said plainly, because it matters: PolyForm Noncommercial is *not* an open source licence and never will be — the Open Source Definition forbids restricting a field of use, and “noncommercial only” is exactly that restriction.

The correct word is **source-available**. Anyone who calls this book open source is wrong, and this book will not be the reason they thought so.

This is not legal advice. It is a plain-English summary written by the kit's author, who is not a lawyer. The licence files are what actually govern.

Why this split, and not one licence for everything

An earlier edition of this kit put *everything* under Apache-2.0 on the argument that the boundary could not be drawn cleanly. The boundary can be drawn cleanly, and it is worth drawing.

The system is a component. Colour tokens and stylesheets are the kind of thing another developer should be able to lift, use and sell without asking anyone — which is precisely what an OSI-approved licence guarantees. Apache-2.0 also states outright that its grant is “*perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable*”, so permanence is written down rather than inferred; and its section 6 reserves the licensor's trademarks inside the licence itself, putting the most important fact about this kit in the document everyone actually reads.

The book is an identity. This guidebook is what GRU953 looks and sounds like. A permissive licence would have let someone sell it, or sell a rebadged copy of it. That is not a freedom worth granting, and PolyForm Noncommercial says exactly that and nothing more. It was chosen over the other PolyForm licences — Small Business, Perimeter, Shield — because the boundary that matters here is commercial versus not, rather than company size or competition.

One honest limit: the PolyForm licences are drafted for *software*, and their text says “the software” throughout. Applying one to a document works by defining the document as the licensed work, which the NOTICE file does — but that is not the use the drafters had in mind, and no lawyer has reviewed it.

▼ **What you may do — the plain-English answer** LICENSING-EXPLAINED.md

Licensing, explained in plain English

সহজ প্রযুক্তি। সবার জন্য। • Simple technology. For everyone.

This is not legal advice. It was written by the kit's author, who is not a lawyer. It explains what the licences say and why they were chosen. If a real decision turns on it, read the licences themselves — both are included in full, unmodified — or ask a lawyer.

1. The one-paragraph version

The kit is split into four parts, and each part has the licence that actually fits it. The **machine-readable system** — colours, tokens, stylesheets, scripts — is under **Apache-2.0**, a genuinely open licence approved by the Open Source Initiative: anyone may use it for anything, including making money. The **book and the writing** are under **PolyForm Noncommercial 1.0.0**: free to read, copy, adapt and share, but not to sell. The **marks** — the bird, the wordmark, the lockups — are **not licensed to anyone**. The **typefaces** keep their own **SIL Open Font Licence 1.1**.

2. The table

WHAT	LICENCE	APPROVED BY THE OSI?	MAY I USE IT COMMERCIALY?
Colour tokens, CSS, every script in this kit	Apache-2.0	Yes	Yes, freely
The guidebook, the chapters, the templates, the documentation	PolyForm Noncommercial 1.0.0	No	Not without asking
The Soaring Bird, the GRU953 wordmark, the lockups, the app icon	Not licensed	n/a	No
Sora, Noto Sans, Noto Sans Bengali, JetBrains Mono	SIL OFL 1.1	Yes	Yes, per the OFL

3. Why Apache-2.0 for the system

Three reasons, in the order they mattered.

It is an OSI-approved open source licence. That is not a slogan; it is a checkable fact, and it is what makes the "for everyone" pillar true rather than decorative. Verified against the Open Source Initiative's approved list on 13 August 2026.

Section 6 protects the marks without any extra work. Apache-2.0 grants copyright and patent permissions and expressly does *not* grant permission to use the licensor's trade names or trademarks. So someone can copy every colour value in this kit and still have no right to present their work as GRU953's. A licence like MIT would have needed a separate trademark notice bolted on beside it.

It carries an express patent grant and a patent-retaliation clause. MIT and BSD do not. For anything that might grow into a product, that is worth having.

The one cost of Apache-2.0 is that it is longer than MIT and asks redistributors to keep a NOTICE file. That cost is real and it was accepted deliberately.

4. Why PolyForm Noncommercial for the book

The guidebook is not a component. It is GRU953's own brand book — the thing that says how GRU953 looks and speaks. Putting it under a permissive licence would have permitted someone to sell it, or to sell a rebadged version of it, which is not a freedom worth granting.

PolyForm Noncommercial 1.0.0 says exactly the intended thing and nothing else: use it, copy it, change it, share it, for any noncommercial purpose. Learn from it. Teach from it. Just do not sell it.

It was chosen from the PolyForm family — the alternatives being Small Business, Perimeter and Shield — because the boundary that matters here is *commercial versus not*, not company size and not competition.

Two honest limits of this choice

PolyForm Noncommercial is not an open source licence. The Open Source Initiative has not approved it and will not, because the Open Source Definition forbids restricting a field of use, and "noncommercial only" is exactly that restriction. Anyone who calls this book "open source" is wrong. It is *source-available*. Verified on 13 August 2026.

The PolyForm licences are drafted for software. Their text says "the software" throughout. Applying one to a document works by defining the document as the licensed work — which is what the NOTICE file does — but it is not the use the drafters had in mind, and no lawyer has reviewed this application of it.

5. Why the marks are not licensed at all

A trademark and a copyright licence do different jobs. Copyright decides who may copy a file. A trademark decides who may claim to *be* GRU953. Giving away the second one would make the brand meaningless.

So neither licence touches the marks, and both say so. The rules for using them are in **TRADEMARKS.md**; the rules for drawing them correctly are in **LOGO-USAGE.md**.

5a. Which licence applies to which file

The rule is: **anything a machine reads is Apache-2.0; anything a person reads is PolyForm; anything that identifies GRU953 is neither.** This table resolves every file in the kit, so there is no grey area to argue about.

PATH	LICENCE	WHY
04_colour/*.py , 03_logo/*.py , 05_type/*.py , 06_assets/*.py , 06_assets/*.mjs , 08_guidebook/build.py , 00_sandbox/*.py , 00_sandbox/*.mjs	Apache-2.0	Code. Each file carries an SPDX-License-Identifier header.
08_guidebook/assets/tokens.css , tokens.json , typography.css , layout.css	Apache-2.0	The machine-readable system.
*/MANIFEST.json , 03_logo/lockup-manifest.json , 09_delivery/VERIFICATION.txt	Apache-2.0	Build output of Apache-2.0 scripts.
08_guidebook/GRU953-Brand-Guidebook.html and .pdf , 08_guidebook/chapters/*.md	PolyForm Noncommercial 1.0.0	The book.
02_strategy/*.md , 01_research/*.md , 04_colour/CONTRAST.md , START-HERE.md , 00_sandbox/TOOLCHAIN.md	PolyForm Noncommercial 1.0.0	Documentation written for a reader.
07_templates/*.md	PolyForm Noncommercial 1.0.0	Written content. The <i>wording you adapt for your own work</i> is yours; the templates themselves are not for resale.
08_guidebook/governance/*	The licence texts are the licensors' own; the explanatory files here are	

PATH	LICENCE	WHY
PolyForm Noncommercial 1.0.0		
03_logo/*.svg , 06_assets/png/* , 06_assets/favicon/* , 06_assets/outreach/*	Not licensed	These are the marks, or artwork built from them. See <code>TRADEMARKS.md</code> .
05_type/** , 08_guidebook/assets/fonts/**	SIL OFL 1.1	Third-party typefaces. Each <code>OFL.txt</code> travels beside its font.

Why there is no REUSE / SPDX manifest

The REUSE specification (<https://reuse.software>) would put a licence header, or a `.license` sidcar, on every one of the several hundred files here. That is the right answer for a project with contributors. For a kit maintained by one person it is several hundred places for the truth to drift, and the table above is one. The code files carry SPDX headers because they are the files most likely to be copied out on their own; everything else is resolved here.

6. What you must do when you redistribute

If you use the Apache-2.0 parts (tokens, CSS, scripts) in your own project:

Include a copy of `LICENSE` .

Include a copy of `NOTICE` , or the parts of it that apply.

Keep any copyright, patent, trademark and attribution notices in the files you took.

State that you changed the files, if you changed them.

Do not use the GRU953 name or marks to describe your work.

If you share the book or the writing under PolyForm Noncommercial:

Do not sell it, and do not use it in the course of making money.

Pass on a copy of `LICENSE-GUIDEBOOK.md` , or the URL for it.

Pass on the `Required Notice:` line, which is in `NOTICE` .

Do not use the GRU953 name or marks to describe your work.

7. Updating your own repositories

Do these in order. Each step is one action.

Open the repository you want to update.

Copy `08_guidebook/governance/LICENSE` into the repository root, named `LICENSE` .

Copy `08_guidebook/governance/NOTICE` into the repository root, named `NOTICE` .

If the repository ships the guidebook or long-form GRU953 writing, also copy `LICENSE-GUIDEBOOK.md` into the root.

Open the repository's `README.md` .

Find the licence line near the bottom. Replace it with: `Licensed under Apache-2.0. See LICENSE and NOTICE. The GRU953 marks are not licensed.`

If a source file carries an old licence header, replace that header with the standard Apache-2.0 header, which is at the very end of `LICENSE` .

Commit with the message `chore: adopt Apache-2.0 for the system, PolyForm for the book` .

Repeat for each repository.

8. Permissions

Anything the licences do not permit, ask for. Commercial use of the book, use of the marks, a bundling arrangement, an exception: **aninda.sh15@gmail.com**.

A short, specific email describing exactly what you want to do gets a faster answer than a general one.

▼ Trademark and brand-usage policy `TRADEMARKS.md`

GRU953 Trademark and brand-usage policy

Owner: Aninda Sundar Howlader (GRU953) · **Contact:** aninda.sh15@gmail.com

The word mark **GRU953**, the **Soaring Bird** logo, the app-icon tile, and any lockup combining them are the "**Marks**". They identify the origin of GRU953's work.

The Marks are not licensed. The kit ships under two licences and neither one touches them. The system — colour tokens, stylesheets, scripts — is under the Apache License, Version 2.0, whose section 6 expressly does *not* grant permission to use the licensor's trade names, trademarks, service marks or product names. The guidebook and the writing are under the PolyForm Noncommercial License 1.0.0, which grants no trademark rights either. Copying this kit's code, tokens or documentation never grants a right to present work as GRU953's.

This is not legal advice. It is written by the kit's author, who is not a lawyer.

Always allowed, no permission needed

Referring to GRU953 truthfully. Naming GRU953 in text to refer to the studio, its releases or its assets — *"built with the GRU953 design tokens"*.

Showing the unmodified logo to identify or link to GRU953 in an article, a talk, a comparison table or press coverage.

Compatibility statements — *"works with GRU953"* — provided your own branding is dominant and no endorsement is implied.

Using the colour values. Plain sRGB hexadecimal numbers are not property.

Using the token names and the CSS — `--gru-meridian-900` and the rest. These are covered by the Apache License, Version 2.0, and may be used commercially.

Using the typefaces. They are third-party fonts under the SIL Open Font Licence 1.1 and have nothing to do with this policy.

Never allowed without written permission

Using the Marks, or anything confusingly similar, as or in your own product name, company name, domain, app icon, repository name or social handle.

Modifying the logo: recolouring outside the approved colours, distorting, rotating, animating, adding effects, re-typesetting the wordmark or the tagline, or combining it with another mark.

Implying sponsorship, endorsement, affiliation or official status.

Using the Marks on merchandise, or in advertising for a paid product.

Keeping the Marks on a fork or a derivative of the kit. **Fork the system freely — the licence permits it — but replace the identity with your own.**

How the name is written

The brand name is always **GRU953** — one word, uppercase, no hyphen and no space. Never "Gru953", "gru-953" or "GRU 953" in prose or in an interface.

The GitHub account handle is `GRU-953`. That is a platform requirement, not the brand name.

The lowercase token `gru953` is a filesystem and package-naming convention only.

What is open, so there is no confusion

The colour tokens, the stylesheets and the build scripts are licensed under the Apache License, Version 2.0, and may be used commercially by anyone. The guidebook, the templates and the documentation are under the PolyForm

Noncommercial License 1.0.0 — free to read, copy, adapt and share, but not to sell.
Full explanation in [LICENSING-EXPLAINED.md](#) .

The Marks are carved out of both, and governed by this policy instead. A copyright licence was never an identity licence: keeping the Marks reserved is what keeps them meaning one thing.

Permission requests

Email aninda.sh15@gmail.com with a short description of the use and a mock-up.
Silence is not consent.

▼ Logo and visual identity usage policy [LOGO-USAGE.md](#)

Logo usage — the Soaring Bird and the GRU953 wordmark

সহজ প্রযুক্তি। সবার জন্য। · Simple technology. For everyone.

Copyright © 2026 Aninda Sundar Howlader (GRU953)

The marks are not licensed. This page says what may be done with them anyway, so that honest use never needs an email. [TRADEMARKS.md](#) is the governing policy; this is the practical half of it.

Plain-English note, written once: this was written by the kit's author, who is not a lawyer. It is not legal advice.

1. Without asking

Show an unaltered logo where the subject is GRU953: a screenshot, a slide about the studio, a link card, a directory entry, a press mention.

Use the logo as a link to GRU953's site or repositories.

Scale it, as long as it stays above the minimum sizes in section 4.

Pick any of the approved colour-on-background pairings in section 3. Not any colour on any background: some pairings are too faint to read and are not approved.

2. Not without written permission

Any use where the logo stands for **you** or your product: your icon, avatar, header, packaging, app-store listing.

Any use implying endorsement, partnership or affiliation.

Any altered version. If you changed it, you needed permission.

Merchandise or print goods.

Keeping the logo on a fork of the kit.

Ask: **aninda.sh15@gmail.com**

3. The files, the colours, and which goes on what

There is one bird

There is exactly one drawing of the Soaring Bird. There used to be three, built separately for different sizes, and they drifted apart — the smallest one ended up with its wing cut away from its body. One drawing cannot drift from itself, so one drawing is what ships.

FILE	WHAT IT IS	USE IT
<code>03_logo/GRU95 3-bird.svg</code>	The mark alone	At 24px and above
<code>03_logo/GRU95 3-appicon.svg</code>	The same bird, in Daybreak on a Meridian tile, at the <i>squircle</i> radius — a rounded square, rounder than a normal button corner, which is the exact shape iOS and Android use for app icons	Below 24px, and anywhere a filled icon is expected
<code>03_logo/GRU95 3-lockup- horizontal.svg</code>	Bird beside the wordmark	The default for headers and banners
<code>03_logo/GRU95 3-lockup- horizontal- tagline.svg</code>	The same, with both taglines	Where there is room to say what GRU953 is
<code>03_logo/GRU95 3-lockup- stacked.svg</code>	Bird above the wordmark	Square and narrow spaces
<code>03_logo/GRU95 3-lockup- stacked- tagline.svg</code>	The same, with both taglines	Posters, covers, title cards
<code>03_logo/GRU95 3- wordmark.svg</code>	The wordmark alone	Where the bird would be too small to read
<code>03_logo/GRU95 3-tagline.svg</code>	Both taglines alone	As a footer or a sign-off

Every one of these embeds the same bird path and the same outlined wordmark. Nothing in the set can drift out of step with anything else.

The approved colours

COLOUR	VALUE	WHAT IT IS FOR
Meridian	#1A1753	The mark on light grounds
Daybreak (dark grounds)	#FFAB8E	The mark on Meridian or Ink
Daybreak (light grounds)	#B45A39	The signature, when the mark must be warm on white
Ink	#0B0E14	Single-colour print, stamps, engraving
Paper	#FFFFFF	Reversed out of a dark ground

No colour beyond these five is approved. The SVGs are drawn with `fill="currentColor"`, so you set the colour yourself — in CSS, `color: #1A1753`.

The tile is the exception: it has one colourway and is not recolourable.

Daybreak on Meridian, always. There is no dark-on-light tile and none will be added — an icon that changes colour stops being a recognisable object at the sizes the tile exists to serve. If a surface needs some other colour, it is big enough for the bare bird, which is recolourable.

Which colour on which background

Only these pairings are approved.

BACKGROUND	MARK COLOUR	CONTRAST
Paper #FFFFFF	Meridian	16.26:1
Paper	Daybreak (light) #B45A39	4.71:1
Paper	Ink	19.32:1
Meridian #1A1753	Daybreak #FFAB8E	8.88:1
Meridian	Paper	16.26:1
Ink #0B0E14	Daybreak #FFAB8E	10.55:1
A photograph	Ink or Paper only	See section 6, item 6

Daybreak #FFAB8E on Paper is not approved. It measures 1.83:1 and the bird all but disappears. This is the one pairing people reach for by mistake — and it is

exactly why the signature has two values. On a light ground, use `#B45A39`.

Daybreak `#B45A39` on Meridian is not approved either. At 3.46:1 it is legible but muddy, and the pale value exists precisely for that ground.

Every figure comes from `04_colour/CONTRAST.md`, where it is computed rather than asserted. A note on what they mean: WCAG's 4.5:1 threshold applies to text, and logos are explicitly exempt from it. These numbers are quoted for legibility, not to claim the logo must pass a standard.

4. Minimum sizes

WHAT	ON SCREEN	IN PRINT
Horizontal lockup	120px wide	25mm wide
Lockup with the tagline	260px wide	55mm wide
The bird alone	24px	6mm
The tile (<code>GRU953-appicon.svg</code>)	16px	—

These are floors, not targets. If a layout can only give the lockup 90px, use the bird alone rather than shrinking the lockup.

Below 24px, use the tile, not the bare bird. The bird's strokes are fine lines; below 24px they thin out and the wing's *counters* begin to close — counters being the small enclosed gaps inside a shape, like the hole in an *o*. The tile carries recognition at those sizes because a block of colour survives where a line drawing cannot. This is checked mechanically every time the mark is generated — `03_Logo/marks.py` refuses to write the file if the counters have closed at 24px.

5. Clear space

Keep empty space on all four sides equal to **half the height of the bird**. For a 32px mark, that is 16px of clear space. For a lockup, measure the bird, not the whole lockup.

Nothing goes inside that space: no text, no icons, no rules, no page edge, no other logo. One number, four sides, and that is the whole rule.

On the web you can let CSS do it. Wrap the logo in the `gru-logo-safe` class from `08_guidebook/assets/layout.css`. It adds the padding for you. One condition: it

is only correct when the logo's own height is set to `1em`. If you size the logo in pixels instead, set the padding yourself.

6. The don'ts

Never:

Stretch or squash it. Scale both dimensions together, always.

Rotate or tilt it. The bird climbs; it does not lean.

Animate it. The mark is still. A logo that moves is a logo that can be caught mid-movement looking broken.

Recolour it outside the five approved colours. No gradients on the mark, no brand-adjacent near-misses, no your-client's-blue. The signature gradient is for hero art, never for the mark itself.

Add effects — drop shadows, glows, outlines, bevels, strokes, textures.

Re-typeset the wordmark or the tagline. Both are artwork, not live text. The Bangla in particular needs real text shaping; retyping it in a font will produce broken conjuncts. Use the supplied files.

Place it on a busy photograph. Put it on a plain area, or on a solid panel of Meridian, Ink or Paper.

Combine it with another mark — no lockups with someone else's logo, no "GRU953 × ...", no enclosing it in a badge or shape that is not in the kit.

Also: do not rebuild a lockup by hand. The spacing between bird, wordmark and tagline is part of the artwork. Use the supplied files.

▼ NOTICE — the mark reservation that travels downstream NOTICE

GRU953 Brand Kit

Copyright 2026 Aninda Sundar Howlader (GRU953)

সহজ প্রযুক্তি। সবার জন্য।

Simple technology. For everyone.

This product bundles work under more than one licence. Which licence applies depends which part of the kit you are using. The full explanation, in plain English, is in LICENSING-EXPLAINED.md.

1. THE SYSTEM — Apache License, Version 2.0

The machine-readable design system: colour tokens (tokens.css, tokens.json), the stylesheets, and every generating script in this kit.

Licensed under the Apache License, Version 2.0 (the "License"); you may not use these files except in compliance with the License. You may obtain a copy of the License at

<http://www.apache.org/licenses/LICENSE-2.0>

Unless required by applicable law or agreed to in writing, software distributed under the License is distributed on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. See the License for the specific language governing permissions and limitations under the License.

The full text is in LICENSE.

2. THE BOOK AND THE WRITING – PolyForm Noncommercial License 1.0.0

The brand guidebook (HTML and PDF), its chapters, the templates, and the written documentation in this kit.

Required Notice: Copyright 2026 Aninda Sundar Howlader (GRU953)

Licensed under the PolyForm Noncommercial License 1.0.0. You may use, copy, modify and share this work for any noncommercial purpose. Commercial use requires separate permission from the licensor.

<https://polyformproject.org/licenses/noncommercial/1.0.0>

The full text is in LICENSE-GUIDEBOOK.md.

PolyForm Noncommercial 1.0.0 is a source-available licence. It is NOT approved by the Open Source Initiative, because it restricts commercial use. That is stated plainly rather than glossed over.

3. THE MARKS – not licensed

The GRU953 wordmark, the Soaring Bird, every lockup, and the app icon are trademarks Aninda Sundar Howlader. They are NOT licensed by either licence above. Apache-2.0 section 6 expressly withholds trademark permission, and the PolyForm licence grants no trademark rights either.

See TRADEMARKS.md for what is allowed without asking, and LOGO-USAGE.md for how to use the mark when you are allowed to.

4. THE TYPEFACES – SIL Open Font License 1.1

Sora, Noto Sans, Noto Sans Bengali, Anek Bangla and JetBrains Mono are licensed under the SIL Open Font License, Version 1.1. Each font's own licence file travels with it in 05_type/source-fonts/ and in 08_guidebook/assets/fonts/.

The guidebook's typography chapter also shows four typefaces that were CONSIDERED and REJECTED – Space Grotesk, Chivo, Bricolage Grotesque and Geist – subset to the few characters the comparison displays. These are also SIL OFL 1.1, and their licences travel with them in 08_guidebook/assets/fonts/specimen/.

Subsetting and instancing a variable font are permitted modifications under OFL 1.1. Reserved Font Names, where a font declares them, must be respected – do not ship a modified font under its original name. None of the fonts here declares one.

<https://openfontlicense.org>

This file is the NOTICE file required by section 4(d) of the Apache License, Version 2.0. If you redistribute any Apache-2.0 part of this kit, this file must travel with

Apache License
Version 2.0, January 2004
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the

direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:
 - (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
 - (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
 - (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
 - (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and

wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. **Submission of Contributions.** Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.
6. **Trademarks.** This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. **Disclaimer of Warranty.** Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. **Limitation of Liability.** In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor

has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

****Use**** means anything you do with the software requiring one of your licenses.

Every asset

সব অ্যাসেট

Every file in the kit — **188** of them, 10.7 MB — is embedded in this page. These buttons work with no internet connection, because the data is inside the document you are reading.

Want everything in one move? `09_delivery/GRU953-Brand-Kit.zip` (7.6 MB) is the whole kit as a single archive. It is not embedded in this page, because every file in it already has its own button below and carrying both would double the size of this book for nothing.

▼ Logo files 14 files

The Soaring Bird, the tile and every lockup, as scalable vectors — plus the master drawing they are all built from.
